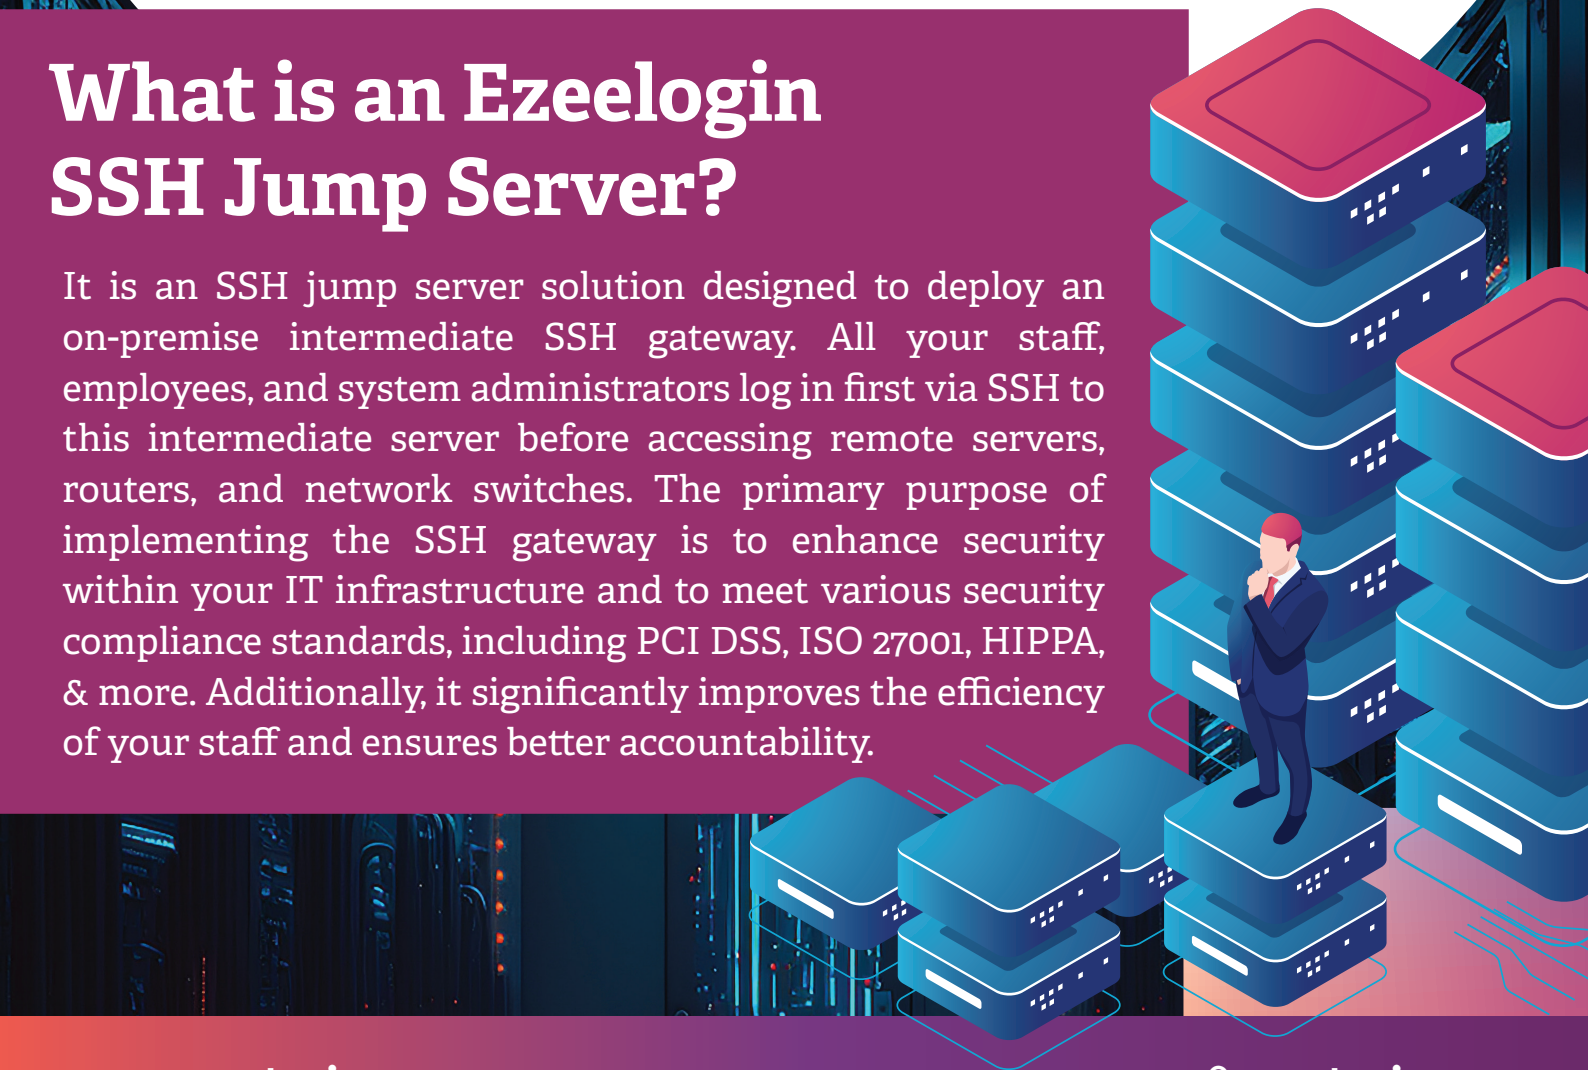
DUO yubico Google Authenticator cPanel OpenLDAP freeRADIUS onelogin okta fido ALLIANCE splunk>

AWS Single Sign-On Azure Active Directory Microsoft Active Directory G Suite

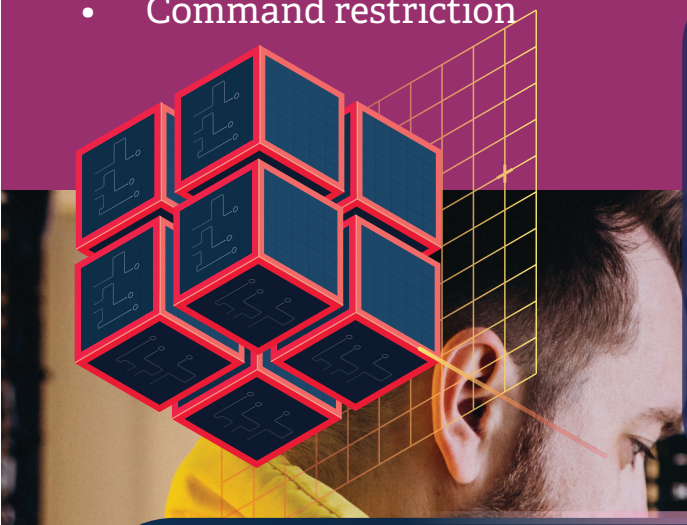
What is an Ezeelogin SSH Jump Server?

It is an SSH jump server solution designed to deploy an on-premise intermediate SSH gateway. All your staff, employees, and system administrators log in first via SSH to this intermediate server before accessing remote servers, routers, and network switches. The primary purpose of implementing the SSH gateway is to enhance security within your IT infrastructure and to meet various security compliance standards, including PCI DSS, ISO 27001, HIPPA, & more. Additionally, it significantly improves the efficiency of your staff and ensures better accountability.



Key Features

- Multifactor authentication (Google 2FA, YubiKey, DUO, & FIDO2)
- Role Based Access Control (RBAC)
- Privileged Access Management (PAM)
- Password & SSH key management for better security & compliance
- Integration with Active Directory & LDAP
- SAML authentication (Okta, OneLogin, AWS SSO, GSuite & Microsoft Azure SSO)
- Integration with SIEM solutions (Splunk, Syslog)
- Audit logs and reporting for compliance requirements
- Cluster for high availability
- RDP access and recording of user sessions
- SSH rate limiting
- Command restriction



Industries we serve

- Information Technology & Cloud Services
- Web Hosting & Data Center
- Banking & Fintech
- Telecommunications & ISPs
- Defence
- E-commerce
- Healthcare
- Education

Why do organizations choose Ezeelogin for their IT Infrastructure?

- Enhanced security
- Improved productivity
- Seamless integration
- Compliance and risk management
- User access control
- User-friendly interface
- Cost efficiency
- Trusted by over 1,000 happy users worldwide

How does Ezeelogin help achieve Audit and Compliance requirements?

- Detailed report generation for annual audits
- Enforced multifactor authentication (MFA) for SSH
- Role-Based Access Control (RBAC)
- Privileged Access Management (PAM)
- Password management and rotation
- Record and track employee's SSH sessions
- Meet compliance requirements like PCI DSS, ISO27001, HIPPA, & more
