

Enable or Disable or force ssl for the web interface

102 admin October 3, 2024 [Tweaks & Configuration](#) 9266

How to enable or disable force SSL for Ezeelogin web interface?

Overview: This article explains how to enable or disable force SSL, ensuring that the Ezeelogin web GUI is accessible only via the HTTPS protocol for gateway users.

Step 1: Before enabling and enforcing SSL, ensure that an [SSL certificate](#) is enabled for the domain/hostname that is used to access the GUI.

<https://www.ezeelogin.com/kb/article/how-to-install-ssl-certs-in-jump-server-secure-connection-207.html>

Step 2: Modify the Ezeelogin configuration file on the gateway server and set the variable **force_https** to **yes**

```
root@gateway:~# vi /usr/local/etc/ezlogin/ez.conf
```

Step 2(A): To enable force SSL

```
force_https yes
```

Step 2(B): To disable force SSL

```
force_https no
```
