

## Enable or Disable or force ssl for the web interface

102 admin June 16, 2023 [Tweaks & Configuration](#) 8620

**You can force the Ezeelogin web gui to be accessed only via the https protocol. Before enabling and enforcing ssl, ensure that ssl certificates is enabled for the domain / hostname used to access the gui. Do refer the article to [install and configure ssl certificates in Apache Webserver Centos7/Centos8/ Ubuntu16/Ubuntu18 OS.](#)**

---

Edit the configuration file

```
vi /usr/local/etc/ezlogin/ez.conf
```

And set the variable

To disable ssl

To enable ssl
