

Can i install ezeelogin Jump server solution in a lan?

114 admin September 21, 2018 [Tweaks & Configuration](#) 23813

LAN with Internet Connectivity

Yes, you can install Ezeelogin Jump server software in a lan which has internet connectivity. Do ensure that the jump box is able to connect to the license server (license.ezeelogin.com) on port 443. The license server would check the public ip that the NAT uses and hence when you purchase the license make sure to buy it for the public ip that is NATed.

If you are unsure on what your jump server IP is, simply logon to your *ssh jump server* and run the command

```
wget -qO- http://ezeelogin.com/myip
```

LAN with NO Internet Connectivity

If you are planning to install Ezeelogin in a LAN with NO Internet Connectivity then request the 24/7 support team for Standalone license.
