

# Can we map existing user group in ldap to Ezeelogin as Ezeelogin user group?

144 admin June 14, 2024 [Tweaks & Configuration](#) 9286

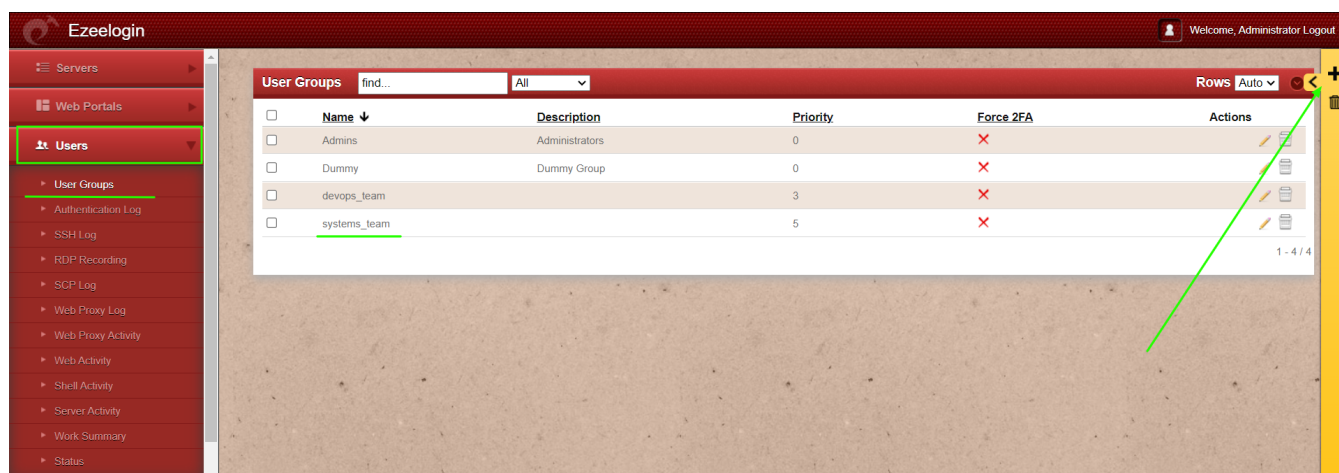

How can an existing LDAP user group be mapped to the Ezeelogin user group?

## FAQ:

- How to assign a user group for LDAP users?
- Is it possible to change the user group for LDAP users?
- Is it possible to use the same group name assigned in LDAP in Ezeelogin user groups as well?

**Synopsis:** This article will help the admin user of Ezeelogin to map groups used by users in LDAP. The admin user needs to create user groups in Ezeelogin with exactly the same names used in LDAP and can set priority to auto-create users to the higher priority groups. In this way, users from LDAP will have the same groups in Ezeelogin as well.

**Step 1: Create the user group within Ezeelogin GUI** by the same name as in LDAP. The LDAP users would be automatically assigned to the same user group within Ezeelogin as it is in LDAP.

**Step 2: Set priority** if the LDAP user belongs to multiple groups in LDAP. The LDAP user will be imported to the highest priority group. Add or edit user group and set priority.

If a user exists in multiple user groups, then the user will import to the user group having higher priority.

The top screenshot shows the 'Edit User Group' form in the Ezeelogin interface. The form has the following fields:

- Name:** systems\_team
- Description:** (empty)
- Priority:** 5 (indicated by a green arrow pointing left)
- Force Two Factor Authentication:** (checkbox, unchecked)
- Command Guard:** (dropdown menu, currently set to '-- None --')
- Buttons:** Cancel, Save

The bottom screenshot shows the 'User Groups' list in the Ezeelogin interface. The list has the following columns: Name, Description, Priority, Force 2FA, and Actions. The 'systems\_team' group is highlighted with a green border.

	Name	Description	Priority	Force 2FA	Actions
<input type="checkbox"/>	Admins	Administrators	0	×	
<input type="checkbox"/>	Dummy	Dummy Group	0	×	
<input type="checkbox"/>	devops_team		3	×	
<input type="checkbox"/>	systems_team		5	×	

**Example:** If a user called Marc is a member of devops team & system team and if we give the highest priority to the system team(priority 5) and lowest for devops team (priority 3), the user Marc will be imported to the user group system team since it has higher priority (5).
