

# How can i reset password / security code ?

152 admin June 13, 2023 [Tweaks & Configuration](#) 6342

Is it possible to change the password/security code by the user itself?

Yes. You can change your password /security code from Ezeelogin GUI.

Login to **Ezeelogin GUI** > **Account** > **Password** > Enter new password/security code and save.

The screenshot shows the Ezeelogin GUI interface. On the left is a sidebar menu with the following items: Servers, Web Portals, Users, Access Control, Settings, Cluster, Command Guard, Account, Preferences, Theme, Key Bindings, Profile, Password, SSH Log, RDP Recording, and SCP Log. The 'Account' and 'Password' items are highlighted with green boxes. The main content area is titled 'Change password, security code, two factor secret'. It contains several input fields: 'New Password' (with a green box around the label), 'Confirm Password' (with a green box around the label), 'New Security Code', 'Confirm Security Code', 'New Access Keyword' (with a blue eye icon), 'Confirm Access Keyword', 'SSH Private Key' (with a blue key icon), 'SSH Key Passphrase' (with a blue key icon), and 'Authorization Password' (with a blue eye icon). There are 'Generate' buttons next to the 'New Security Code' and 'New Access Keyword' fields. At the bottom right, there are 'Cancel' and 'Save' buttons, with a green arrow pointing to the 'Save' button.
