How to grant Parallel Shell privilege for a user?

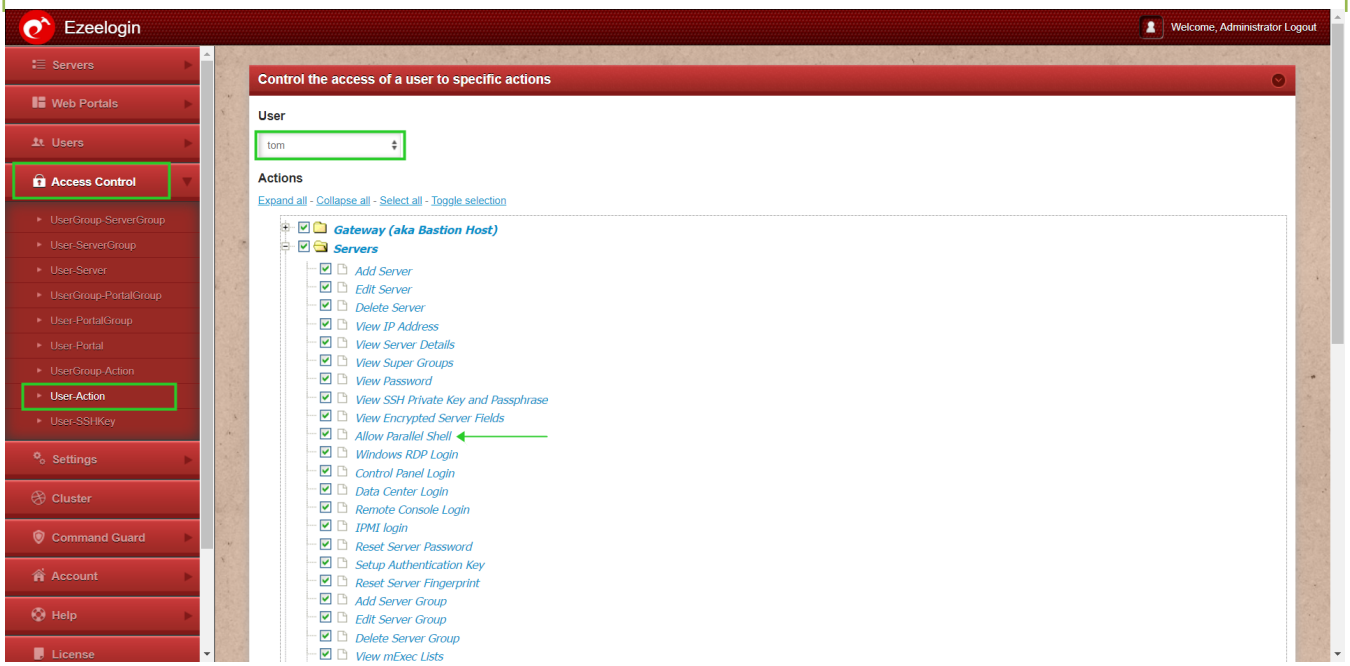
158 admin December 2, 2023 Features & Functionalities, Productivity & Efficiency Features, Technical 9409

Grant Parallel Shell Privilege For a User.

Parallel shell by default is disabled for all users except for the admin user created at the time of installation and has to be granted explicitly.

To grant Parallel Shell access to a user, Go to *Access Control->User -Action->Servers->Allow Parallel Shell* and enable it. After, enabling Parallel Shell, do re-login into the Ezsh shell so that the new settings are loaded.

Note: Make sure to log in as the super admin user or the privileged user to grant permission to access the parallel shell.



Note: Every command will work in the parallel shell except the interactive commands like file editor (vi, nano), top, etc.

How to use the parallel shell in Ezeelogin to execute commands in all remote devices at the same time?
