

Configure four eyes authorization

165 admin October 5, 2024 [Security Features](#), [Two Factor Authentication \(2FA \)](#) 7024

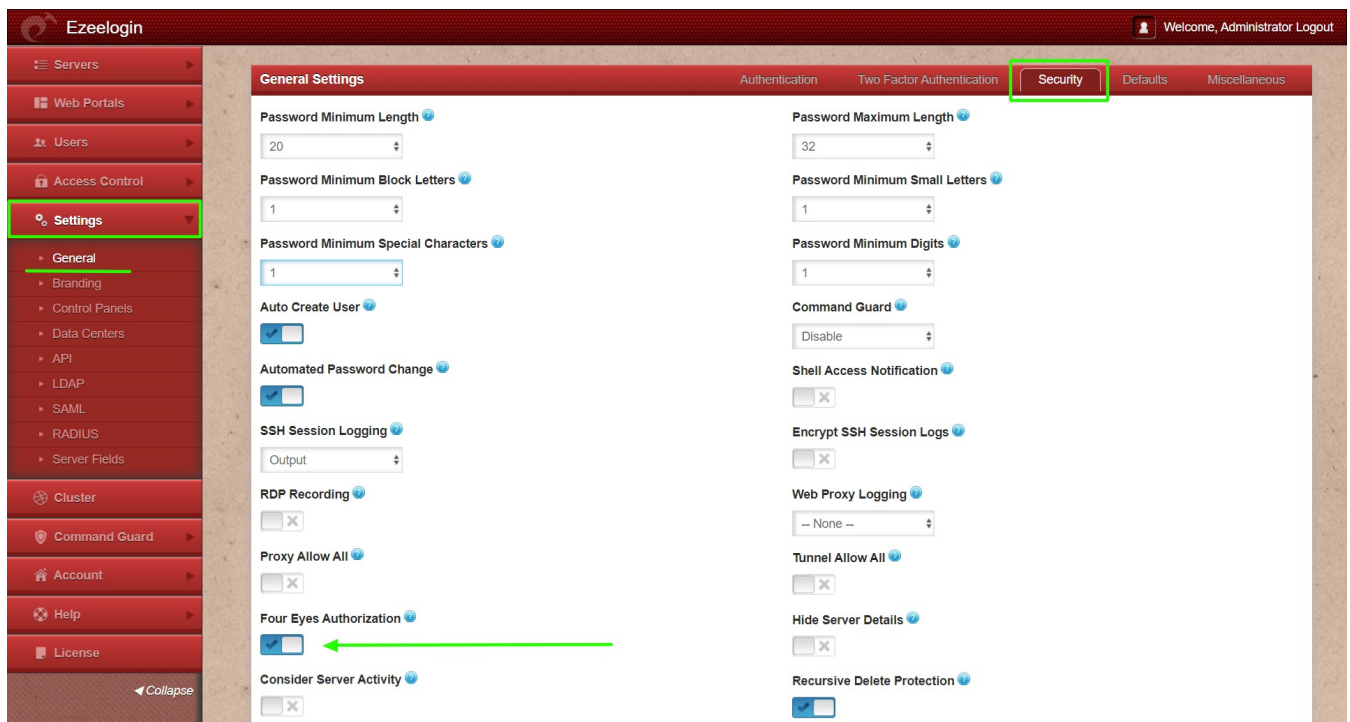

How to configure Four eyes authorization in Ezeelogin?

Overview: This article helps Ezeelogin admin users in configuring four-eye authorization so that the gateway user would have to be authorized by another user with four eyes authorization privilege in access control to view the SSH logs of any user.

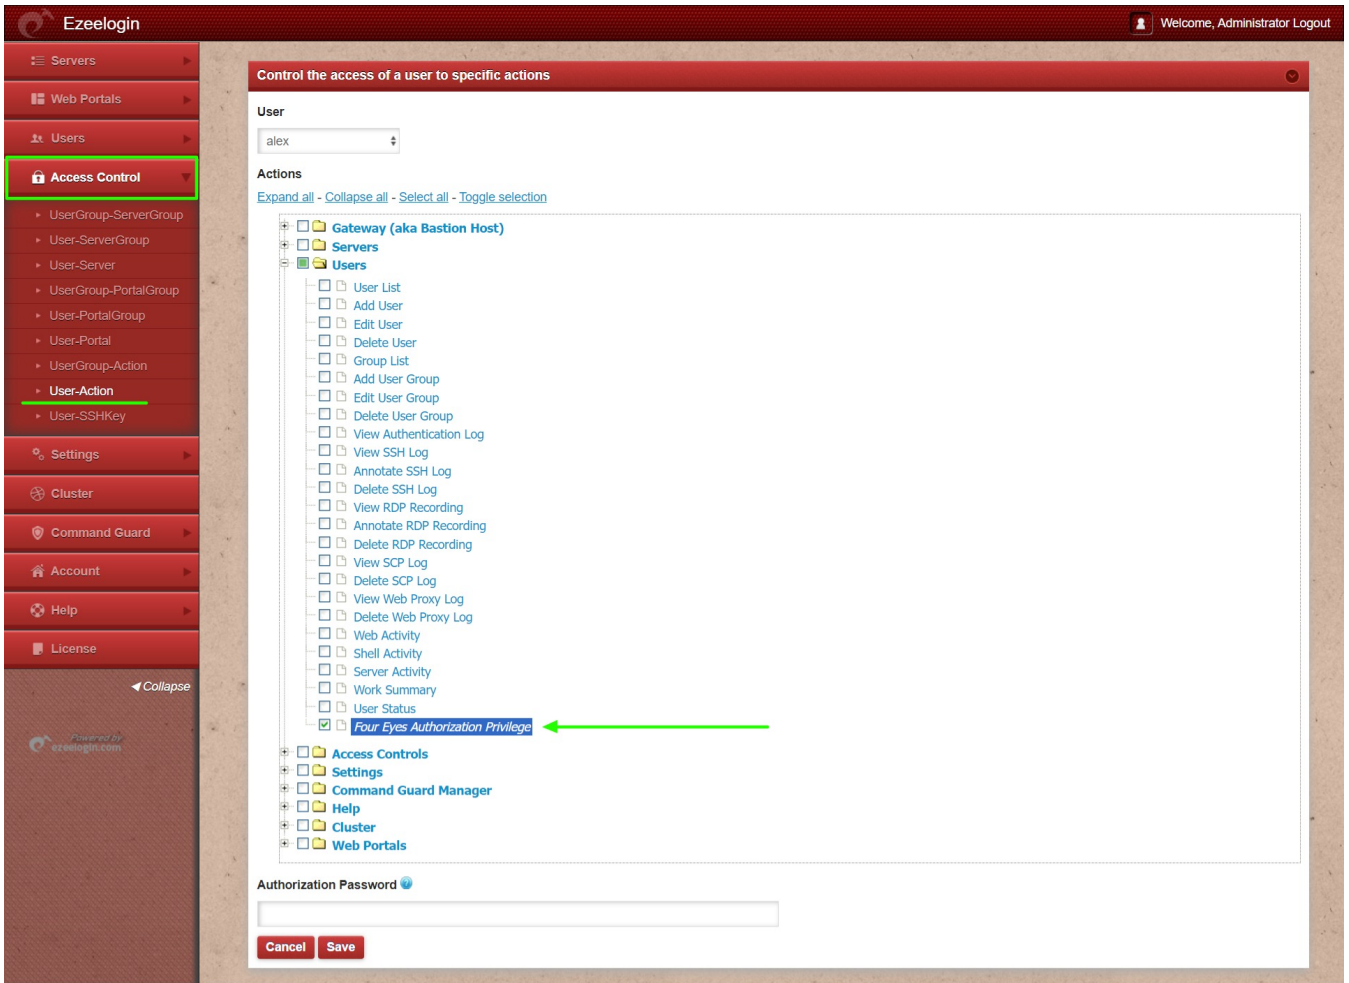

Note:

Four-eye authorization in Ezeelogin is used to view the SSH recordings of any user with only two-factor authentication.

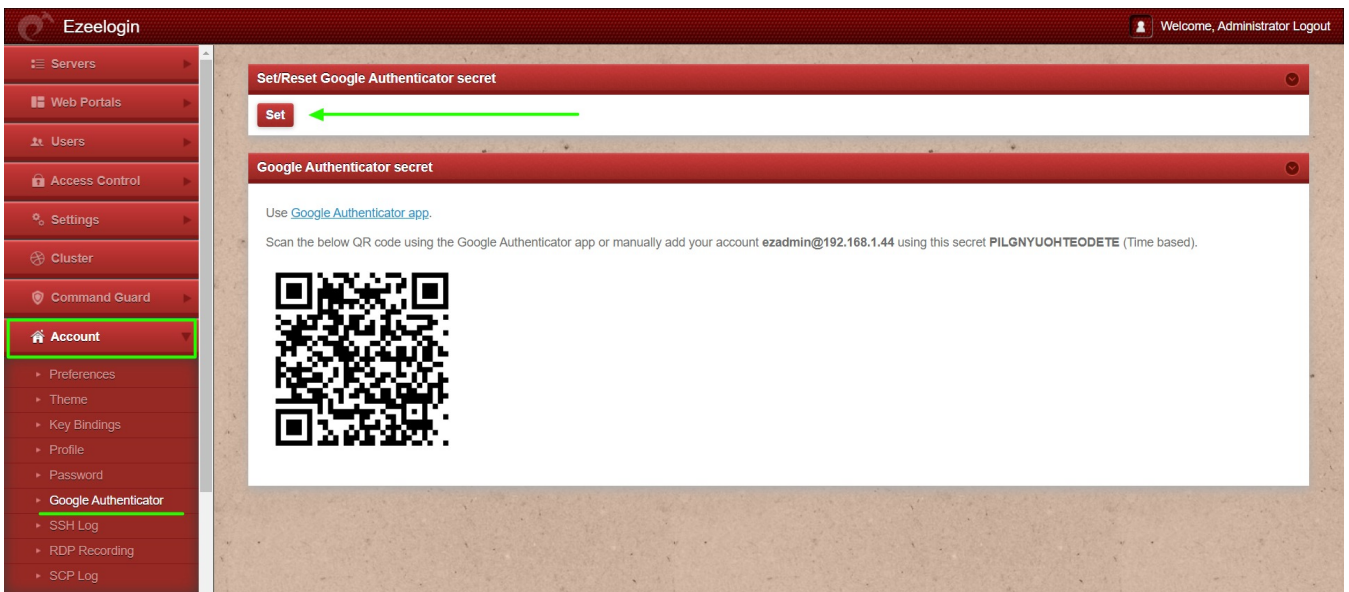

Step 1: Login to Ezeelogin GUI -> Settings -> General -> Security -> Four eyes authorization

Step 2: Make sure Four Eyes Authorization Privilege is enabled for the user who would be granting access to view ssh logs. Go to **Access Control-> User-Action** and grant the user **Four Eye Authorization Privilege**.

Step 3: Ensure that one of the [two-factor authentication](#) methods [Google 2FA](#), [Yubikey](#), or [DUO Security](#) is configured for the four eyes authorizing user. Refer below example to setup Google 2FA.

Step 4: After configuring four eyes authorization, for viewing ssh logs, navigate to **Users -> SSH Logs -> select user and server -> View SSH Log**

The screenshot shows the Ezeelogin web interface. On the left is a navigation sidebar with 'Users' selected. The main area has a search panel with filters for User, Server, Log Type, From, and To. Below the search panel is a table of SSH logs. The table has columns: User, SSH User, Server, Log Type, Status, Encryption, Time, mExec ID, and Actions. A green arrow points to the 'Actions' column.

User	SSH User	Server	Log Type	Status	Encryption	Time	mExec ID	Actions
+ alex	root	debian.server	output	Ended	0	2023-08-21 19:19:32		[Icons]
+ alex	root	ubuntu.server	output	Ended	0	2023-08-21 19:19:29		[Icons]
+ alex	root	debian.server	output	Ended	0	2023-08-21 19:19:26		[Icons]
+ alex	root	ubuntu.server	output	Ended	0	2023-08-21 19:18:57		[Icons]
+ ezadmin	root	ubuntu.server	output	Ended	0	2023-08-21 15:22:30		[Icons]

Step 5: To view the SSH logs, the name and two-factor code of the user with four-eye authorization privileges must be entered.

The first screenshot shows a red header 'Four Eyes Authorization Required'. Below it is a form with a 'Username' label and a text input field containing 'ezadmin'. A red 'Continue' button is at the bottom.

The second screenshot shows a red header 'Google Authenticator verification'. Below it is a text prompt: 'Enter the verification code generated by your Google Authenticator app'. There is a label 'Enter the code' and a text input field containing '253441'. A red 'Authorize' button is at the bottom.

Step 6: The user will now be able to view the SSH log with four eyes authorization.
