# Default outbound ssh port for target servers added in

174 admin December 21, 2017 [Tweaks & Configuration](#) 4664

You can change the default outbound port number for target servers that are added
in *Settings->General->Defaults-> Defaults SSH Port.*

For example, if you are using port 32002 for your fleet of servers, then change Default SSH Port
variable so that you it would be default port number when you add in a target server.
