

How do I configure Ezeelogin to authenticate using OpenLdap or Window AD server?

178 Manu Chacko May 6, 2024 [Tweaks & Configuration](#) 9979

1. How do I configure the Ezeelogin jump server to authenticate using OpenLDAP or Window AD server?

2. How do I configure the SSH gateway to authenticate from LDAP or Windows AD server?

With the AutoCreate feature, the backend ssh authentication would not be using PAM-LDAP, instead, it would create a system user in the shell and would then be using system authentication for the backend authentication.

The advantage of using the AutoCreate feature is that you would not have to configure LDAP in ssh or modify your existing Active Directory attributes or OpenLDAP attributes.

Do read more about the drawbacks, since the ssh authentication would not be via LDAP, [here](#)

Make sure that the PHP-LDAP extension is installed on the server

For ubuntu 14.X, 16.x, 18.x, 20.x, 22.x. Replace the PHP version in the below command

For Centos 6 , 7

```
root@jumpserver:~# yum install php-ldap ; apachectl restart
```

Integration of OpenLdap in ezeelogin jumpserver (Import openldap user to Ezeelogin jumpserver)

1. Login to **Web-GUI** > open settings > **LDAP**

How to find base DN and bind RDN from Windows server

Add the details of LDAP configurations

The screenshot shows the Ezeelogin Web-GUI interface. On the left, there is a vertical navigation menu with the following items:

- Servers
- Web Portals
- Users
- Access Control
- Settings** (highlighted with a green border)
- General
- Branding
- Control Panels
- Data Centers
- API
- LDAP (highlighted with a green border)
- SAML
- RADIUS
- Server Fields
- Cluster
- Command Guard
- Account
- Help
- License

On the right, the main content area is titled "LDAP Settings". It contains the following configuration fields:

- Name:** openldap
- URI(s):** ldap://10.11.1.164
- Start TLS:** (checkbox)
- Bind RDN:** cn=Administrator,cn=users,dc=ad2016,dc=admod,dc=net
- Base DN:** cn=users,dc=ad2016,dc=admod,dc=net
- Bind Password:** (redacted)
- UID Attribute:** sAMAccountName
- First Name Attribute:** givenName
- Email Attribute:** mail
- Filter:** (redacted)
- Last Name Attribute:** (redacted)
- Group Attribute:** (redacted)
- Timeout:** 10
- Rank:** 10
- Active:** (checkbox checked)
- Windows Active Directory:** (checkbox checked)

At the bottom right are two buttons: "Cancel" and "Save".

2 .Open **Settings > General Settings > Authentication** > Change webpanel authentication to **LDAP**

4. Select the LDAP users and import them to Ezeelogin.

<input type="checkbox"/>	Username	First Name	Last Name	Email	Status	User Group	LDAP	Notes
<input type="checkbox"/>	alex	alex			New	Dummy	openldap	
<input checked="" type="checkbox"/>	jake	jake			New	Dummy	openldap	
<input type="checkbox"/>	john	john			New	Dummy	openldap	

1 - 3 / 3

<input type="checkbox"/>	Username	First Name	Last Name	Email	Status	User Group	Actions
					No item		

You can confirm the imported LDAP users were listed in the Users tab.

After importing the users to Ezeelogin, log in with the user and set up security code for the user under **Account > Password > New Security Code**.

Integration of Windows AD in Ezeelogin(Import Windows AD user to jump server)

How to find base DN and bind RDN

1. Login to Web-GUI > open settings > LDAP

Add the details of LDAP configurations & Check the WINDOWS ACTIVE DIRECTORY

Ezeelogin

Welcome, Administrator Logout

LDAP Settings

Name: openldap

URI(s): ldap://10.11.1.164

Start TLS:

Bind RDN: cn=Administrator,cn=users,dc=ad2016,dc=admod,dc=net

Base DN: cn=users,dc=ad2016,dc=admod,dc=net

Bind Password:

UID Attribute: sAMAccountName

Filter:

First Name Attribute: givenName

Last Name Attribute:

Email Attribute: mail

Group Attribute:

Timeout: 10

Rank: 10

Active:

Windows Active Directory:

Cancel Save

2. Open **Settings > General > Authentication** > change webpanel authentication to LDAP

Ezeelogin

Welcome, Administrator Logout

Password / Security Code Retries: 2

Login captcha: Disable

Web Panel Authentication: LDAP (highlighted with a green arrow)

External SSH Auth:

reCAPTCHA Sitekey: [Get reCAPTCHA API Key](#)

reCAPTCHA Secret:

User Password Lifetime: 0

Maximum Days Without Login: 0

Allow Browsers To Save Login:

Security Code LDAP:

Cancel Save

3. Open **Settings >General > Security >Check Auto Create User**

The screenshot shows the Ezeelogin interface with the 'General' tab selected under 'Settings'. The 'Security' tab is highlighted with a green border. The page displays various password-related settings:

Setting	Value
Password Minimum Length	20
Password Maximum Length	32
Password Minimum Block Letters	1
Password Minimum Small Letters	1
Password Minimum Special Characters	1
Password Minimum Digits	1
Auto Create User	Enabled (checked)
Command Guard	Disable
Automated Password Change	Disabled
Shell Access Notification	Disabled
SSH Session Logging	Output
Encrypt SSH Session Logs	Disabled

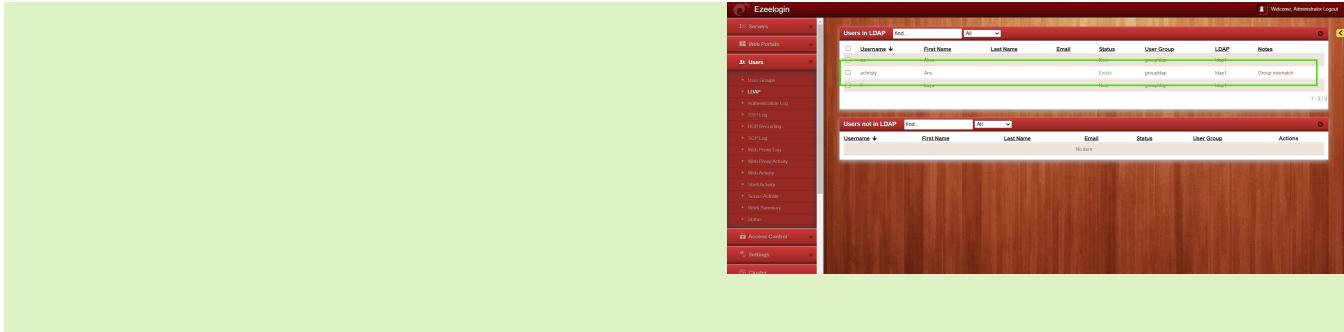

4. Select the LDAP users and import them to Ezeelogin

The screenshot shows the Ezeelogin interface with the 'LDAP' tab selected under 'Users'. A green arrow points to the 'Import/Update selected' button at the top right of the user list. The list shows three users:

Username	First Name	Last Name	Email	Status	User Group	LDAP	Notes
alex	alex			New	Dummy	openldap	
jake	jake			New	Dummy	openldap	
john	john			New	Dummy	openldap	

The 'Users not in LDAP' section below is empty.

When importing an LDAP user, they will be assigned to the default group or the mapped user group. After the import, if we change the LDAP user to another user group, we will receive a note saying "Group Mismatch." This is not an error.

You can confirm the imported LDAP users were listed in the Users

After importing the users to Ezeelogin, log in with the user and set up a security code for the user under **Account > Password > New Security Code**.
