## How to set a custom SSH port in the Ezeelogin gateway?

---

**Overview:** This article provides an overview of setting up a custom port number for sshd when it is configured to listen on a port other than the default SSH port 22.

---

Navigate to **Settings-> General-> Miscellaneous-> Gateway SSH Port** and specify the SSH port number. This would be the port that SSH daemon would be listening on the ezeelogin gateway server and ezeelogin users would be connecting to this port.

The screenshot shows the Ezeelogin web interface. The left sidebar contains navigation options like Servers, Web Portals, Users, Access Control, Settings (highlighted), General, Branding, Control Panels, Data Centers, API, LDAP, SAML, FIDO2, RADIUS, SIEM, Server Fields, Cluster, Command Guard, Account, Help, and License. The main content area is titled 'General Settings' and has tabs for Authentication, Two Factor Authentication, Security, Defaults, and Miscellaneous (highlighted). The 'Gateway SSH Port' field is set to 2014. The 'Web Proxy Port' is 52666. The 'Web Proxy Request Timeout' is 120. The 'Web Proxy Forwarded Header' is checked. The 'Log Space Threshold (MB)' is 0.
