

How to copy a file to a remote server or group of servers behind the ssh jumphost? Parallel Copy - How to do it?

202 admin February 20, 2025 [Productivity & Efficiency Features](#) 9608

Transfer / copy files from user desktop to remote servers via the gateway server (backend)

Overview: This article explains transferring files between a desktop and remote servers via gateway server. It covers copying files to the Ezeelogin jumphost server, using ezsh shell for secure file transfers to individual servers or groups, and exporting SCP logs in .csv format.

Step 1: Copy the file to the Gateway server first. Refer [how to copy a file from desktop to ssh jumphost](#)

Step 2: Login into ezsh shell and select the remote server to which the file has to be transferred or the server group to which file has to be transferred.

In the example below, we will be transferring file to remote server PROD-WS01, hence selected as shown. After selecting the server to which the files has to be transferred, **press 'f9' or '%'** to get the secure copy menu.

```

Closing... done

Successfully executed on all 0 device(s).

Secure copy to server: PROD-WS01. [Enter the source file path relative to /home/admin]
[Source file]>
```

In order to transfer the file to a group of servers or a custom list of servers , press 'f7' or '*' to get to the [MEXEC menu](#), then navigate to the server group or mExec lists(myCustomList) to which the files needs to be transferred and then press 'f9' or '%' to get to the secure copy menu.

In the example below, we have chosen the Amazon ec2 instances server group.

Step 1. Press 'f9' or '%' to open up the Secure Copy in ezsh shell. In Source file, enter the relative path to the file that needs to be transferred. In the example, we have selected ioncube_loaders_lin_x86-64.tar.gz as the file to be copied to remote server fatboy.eznoc.com. In the Destination file, enter the absolute path including the complete file name as shown below.

Note: Pressing the 'tab' key would list the different files that is the home directory of the user available for transfer

Note: folders or directory cannot be transferred as such. They have to be compressed into a file such as a .zip file or .tar file or tar.gz etc to transfer.

When doing a transfer of file to the server group, the output is as shown below. As you can see the files were copied to remote servers 'messi.eznoc.com' and 'martian.eznoc.com'

which were the members in the server group 'PRODUCTION SERVERS-01'.

Note: You can exit from the shell after secure copy by typing the command 'exit '

Transfer logs from the gateway server to the remote server can be found in the below screenshot

The screenshot displays the Ezeelogin web interface. On the left sidebar, the 'SCP Log' menu item is highlighted with a green box. The main content area shows a search filter for 'User: ezadmin' and a date range from '2021-04-27 23:54' to '2021-04-29 23:54'. Below the search filters, there is a table of SCP logs. The second row of the table is highlighted with a green border.

<input type="checkbox"/>	User	Source	Destination	Source file path	Destination file path	Start Time	End Time	Time taken	Size (MB)	Average Speed (KB/s)	Status	Actions
<input type="checkbox"/>	ezadmin	centos.server	GATEWAY	/root/ioncube_loaders_lin_x86-64.tar.gz	/home/ezadmin/ioncube_loaders_lin_x86-64.tar.gz_centos.server~Thu_Apr_29_05:18:33_2021	2021-04-29 05:18:33	2021-04-29 05:18:34	1	13.08	13392.83	Completed	
<input type="checkbox"/>	ezadmin	GATEWAY	centos.server	/home/ezadmin/ioncube_loaders_lin_x86-64.tar.gz	/root/ioncube_loaders_lin_x86-64.tar.gz	2021-04-29 05:27:06	2021-04-29 05:27:06	0	13.08	NA	Completed	

Transfer / Copy files from the remote server to Ezeelogin gateway

Step 1. In the example below, we will use 'centos.server' as the remote server. We will transfer a file from this remote server to the gateway server. Navigate to the remote server and press '^' to open the secure copy in the ezsh shell.

```
*centos.server 192.168.56.155 (Linux Server)
ubuntu.server 192.168.56.177 (Linux Server)

SERVERS [Linux Server] (group) [Normal / ]
Start typing string to locate. ESC: Clear search, F1/+: Help, F4/!: Exit.
```

Step 2. we have chosen `ioncube_loaders_lin_x86-64.tar.gz` as the file to copy from `centos.server` to the gateway server. Enter the full path of the file in the source file prompt and specify the destination file name. After a successful transfer, files will be available in the `/home/ezadmin` directory.

```
Secure copy from server: centos.server. [Enter the destination file path relative to /home/ezadmin]
[Source file]> /root/ioncube_loaders_lin_x86-64.tar.gz
[Destination file]> ioncube_loaders_lin_x86-64.tar.gz

centos.server

Transferring...
Source: /root/ioncube_loaders_lin_x86-64.tar.gz
Destination: /home/ezadmin/ioncube_loaders_lin_x86-64.tar.gz_centos.server~Thu_Apr_29_05:18:33_2021
Size: 13714255 bytes
...5%...10%...15%...20%...25%...30%...35%...40%...45%...50%...55%...60%...65%...70%...75%...80%...85%...
90%...95%...100%
Closing... done

Secure copy from server: centos.server. [Enter the destination file path relative to /home/ezadmin]
[Source file]> □
```

How to transfer files from server group to gateway server. (Remote server to Gateway)

Note: Files in the remote server (group) should have same name in order to transfer from group to gateway server.

Press ' F7 ' or ' * ' in ezsh shell to get into [mexec list](#) and then navigate to the server group from which you want to transfer. Then press ' ^ ' to get into the secure copy of ezsh shell.

```
No mExec list
Amazon Server
*Linux Server
All servers List of all accessible servers
```

```
MEEXEC [Normal / ]
Start typing string to locate. ESC: Clear search, F1/+: Help, F4/!: Exit.
```

You need to **enter the full path of the file in the source file prompt and specify the name for the file in the destination file prompt**. If the specified file is available on the remote servers, it will be successfully transferred to the gateway server. After a successful transfer, files will be available in the /home/ezadmin directory.

```
Secure copy from group: Linux Server. [Enter the destination file path relative to /home/ezadmin]
[Source file]> /root/ioncube_loaders_lin_x86-64.tar.gz
[Destination file]> ioncube_loaders_lin_x86-64.tar.gz

centos.server

Transferring...
Source: /root/ioncube_loaders_lin_x86-64.tar.gz
Destination: /home/ezadmin/ioncube_loaders_lin_x86-64.tar.gz_centos.server~Thu_Apr_29_05:23:07_2021
Size: 13714255 bytes
...5%...10%...15%...20%...25%...30%...35%...40%...45%...50%...55%...60%...65%...70%...75%...80%...85%...
90%...95%...100%
Closing... done

ubuntu.server

Transferring...
Source: /root/ioncube_loaders_lin_x86-64.tar.gz
Destination: /home/ezadmin/ioncube_loaders_lin_x86-64.tar.gz_ubuntu.server~Thu_Apr_29_05:23:07_2021
Size: 13714255 bytes
...5%...10%...15%...20%...25%...30%...35%...40%...45%...50%...55%...60%...65%...70%...75%...80%...85%...
90%...95%...100%
Closing... done

Secure copy from group: Linux Server. [Enter the destination file path relative to /home/ezadmin]
[Source file]> █
```

Note:

The transferred file will be saved in filename_remote.server_timestamp format.

In the above example it will be
ioncube_loaders_lin_x86-64.tar.gz_centos.server~Thu_Apr_29_05:18:33_2021

Here `ioncube_loaders_lin_x86-64.tar.gz` is the filename , `centos.server` is the remote server and `Thu_Apr_29_05:18:33_2021` is the timestamp.

Transfer logs from the remote server to the gateway server can be found in the below screenshot.

The screenshot shows the Ezeelogin web interface. On the left is a navigation menu with 'Users' and 'SCP Log' highlighted. The main area has a search form with fields for User (ezadmin), Source, Destination, Source file path, and Destination file path. Below the search form is a table of SCP Logs. The first row is highlighted with a green border.

<input type="checkbox"/>	User	Source	Destination	Source file path	Destination file path	Start Time	End Time	Time taken	Size (MB)	Average Speed (KB/s)	Status	Actions
<input type="checkbox"/>	ezadmin	centos.server	GATEWAY	/root/ioncube_loaders_lin_x86-64.tar.gz	/home/ezadmin/ioncube_loaders_lin_x86-64.tar.gz_centos.server-Thu_Apr_29_05:18:33_2021	2021-04-29 05:18:33	2021-04-29 05:18:34	1	13.08	13392.83	Completed	
<input type="checkbox"/>	ezadmin	GATEWAY	centos.server	/home/ezadmin/ioncube_loaders_lin_x86-64.tar.gz	/root/ioncube_loaders_lin_x86-64.tar.gz	2021-04-29 05:27:06	2021-04-29 05:27:06	0	13.08	NA	Completed	

How to export SCP Log?

You can download all the SCP logs of the users in .csv format by clicking on export. Refer the below screenshot

The screenshot shows the Ezeelogin web interface. In the top right corner, a notification for 'scplog.csv' (652 B - Done) is visible. The left sidebar menu has 'Users' and 'SCP Log' highlighted. The main search area includes filters for User (admin), Source, Destination, Source file path, and Destination file path. The date range is set from 2024-04-13 01:49 to 2024-04-15 01:49. Below the search filters, there are 'Export', 'Reset', and 'Find' buttons. The 'SCP Logs' section shows a table with the following data:

User	Source	Destination	Source file path	Destination file path	Start Time	End Time	Time taken	Size (MB)	Average Speed (KB/s)	Status	Actions
<input type="checkbox"/>	admin	GATEWAY blue.eznoc.com	/home/admin/.ioncube_loaders_lin_x86-64.tar.gz	/root/ioncube_loaders_lin_x86-64.tar.gz	2024-04-14 07:10:28	2024-04-14 07:10:31	3	13.97	4767.24	Completed	
<input type="checkbox"/>	admin	GATEWAY spacex.eznoc.com	/home/admin/.ioncube_loaders_lin_x86-64.tar.gz.1	/root/ioncube_loaders_lin_x86-64.tar.gz.1	2024-04-14 07:15:54	2024-04-14 07:15:59	5	15.00	3072.20	Completed
