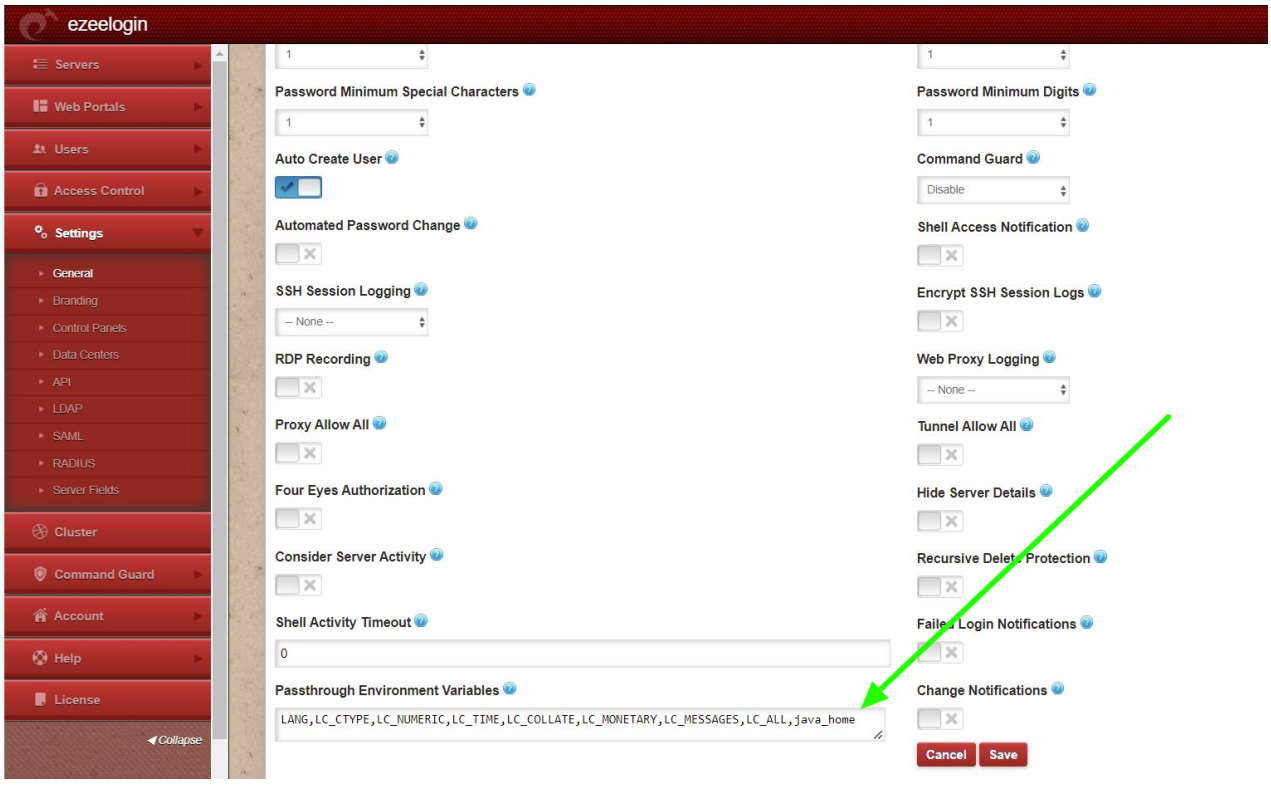
How to pass environment variable through jump server?

227 Manu Chacko July 13, 2023 Tweaks & Configuration 4405

How can I forward env variables over ssh in Ezeelogin?

1. Add environment variable to Ezeelogin GUI > settings > General > Security > Passthrough Environment Variables



2. Allow environment variable in /etc/ssh/sshd_config of Ezeelogin installed gateway server & the remote server

Restart ssh service

3. Add the environment variables to the /etc/ssh/ssh_config as follows to your desktop machine or from the machine you need to forward the environment variable .

> Refer to the article to view the client username and IP in the remote server
