

# Set SSH User Expiry

239 admin October 13, 2024 [Productivity & Efficiency Features](#), [Security Features](#), [Tweaks & Configuration](#) 8146

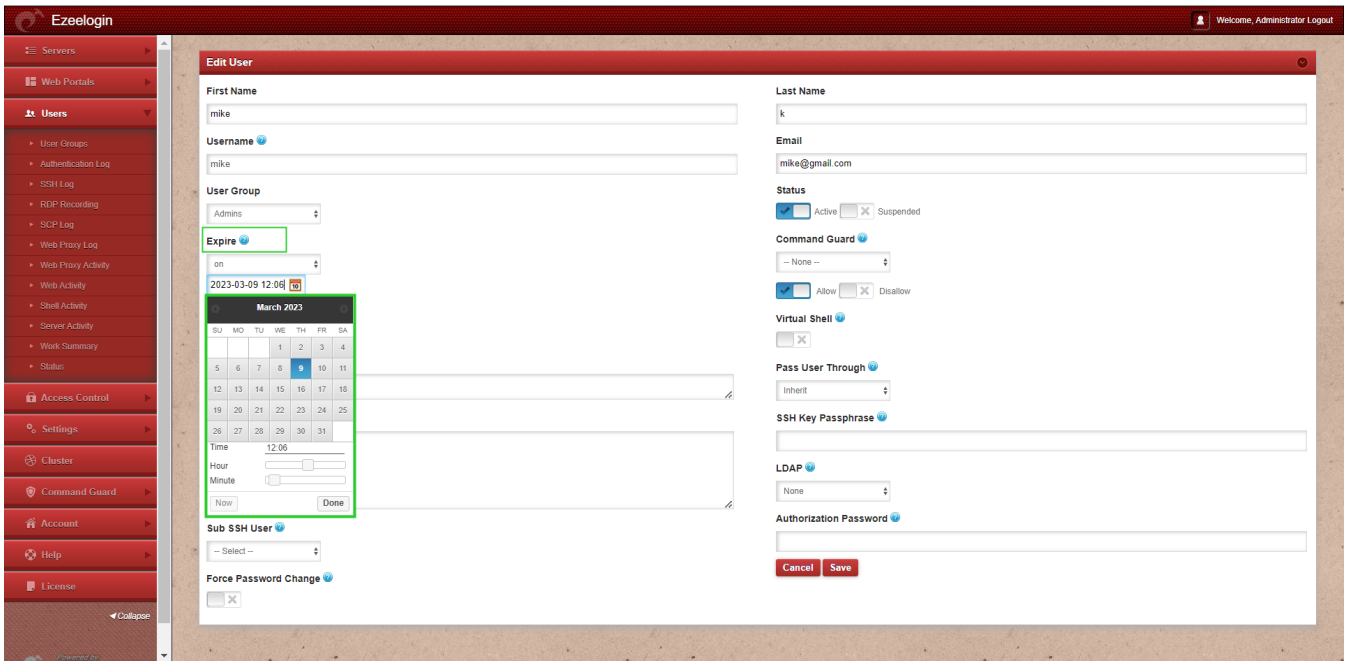

## How to set the expiry for Ezeelogin SSH gateway users?

**Overview:** This article describes the feature that lets you manage the duration for which an SSH gateway user will have access to the gateway after expiry. The duration of the SSH access to the gateway can be set to expire in minutes, hours, days, or on a date as shown below. This is useful while granting temporary access to a user.

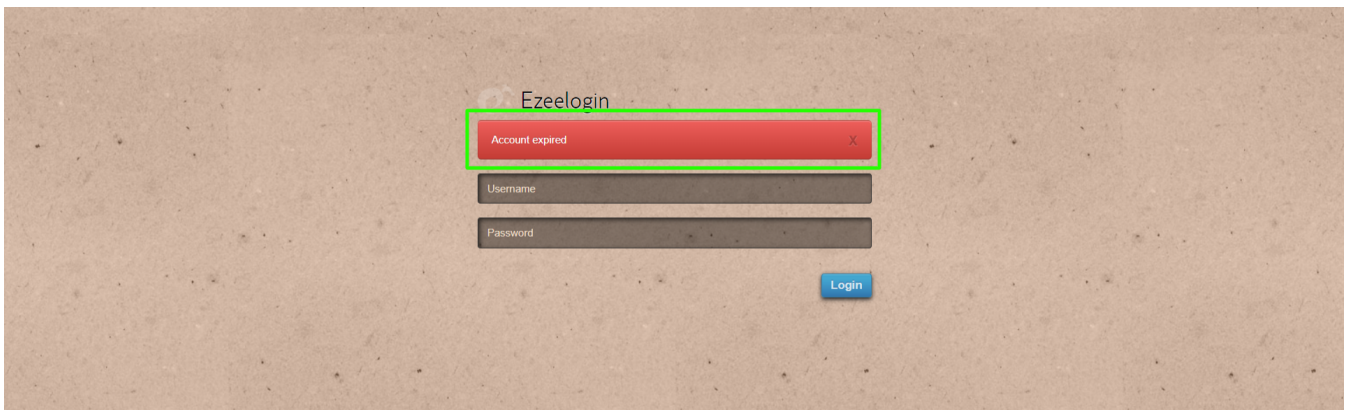

**Step 1:** Navigate to **User section** -> **Edit the user** -> **set the expiry** and save it.

Refer to the screenshot below to set SSH user expiry:

**Step 2:** After the duration of expiry, the user gets expired.

**Step 3:** You can disable the user's suspension by setting the status of the user as **Active** as shown below.

The screenshot displays the 'Edit User' form in the Ezeelogin web interface. The form is organized into several sections: 'First Name' (mike), 'Last Name' (k), 'Username' (mike), and 'Email' (mike@gmail.com). The 'User Group' is set to 'Admins'. The 'Status' section, highlighted with a green box, shows 'Active' selected and 'Suspended' as an alternative. Other sections include 'Expire' (set to 'on' with a date of 2023-03-09 12:06), 'Limit IPs', 'Allowed IPs', 'SSH Private Key', 'Sub SSH User' (set to '-- Select --'), and 'Force Password Change'. On the right side, there are sections for 'Command Guard' (set to 'Allow'), 'Virtual Shell', 'Pass User Through' (set to 'Inherit'), 'SSH Key Passphrase', and 'LDAP' (set to 'None'). At the bottom right, there are 'Cancel' and 'Save' buttons.

Only the **admin-privileged** user would be able to log into the web interface and unsuspend the users ( users -> edit -> set status to active -> enter authorization password(password of the currently logged in user) -> save). Note that this is possible for admin-privileged users and not for any other user.
