

# How to restore primary using slave node?

266 Manu Chacko June 4, 2024 [Common Errors & Troubleshooting](#) 1607

## Restore primary using slave node

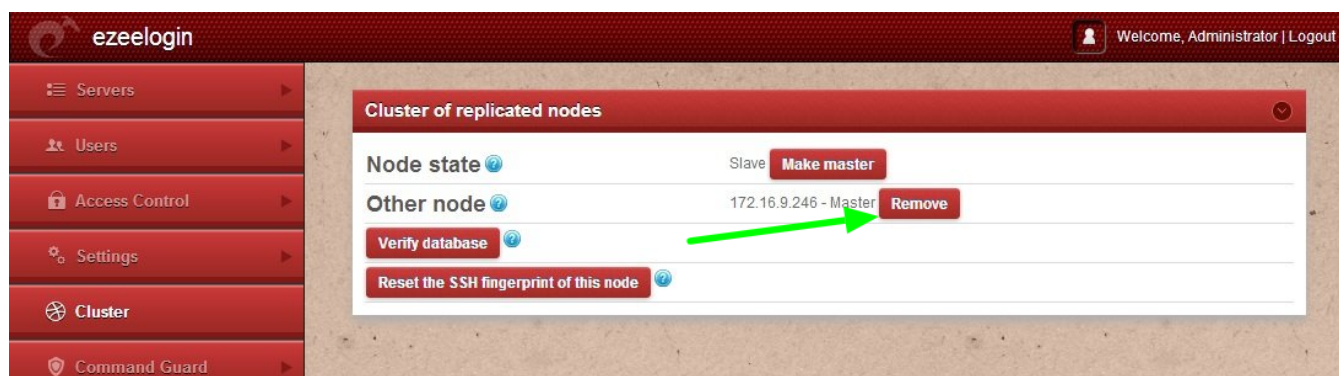

- 1) Login to the slave node (secondary node)
- 2) Promote the secondary as Master node by clicking

Web Panel -> Cluster -> "Make Master" (Ref: [https://www.ezeelogin.com/user\\_manual/ConfigureCluster.html](https://www.ezeelogin.com/user_manual/ConfigureCluster.html))

- 3) Then remove the other node by

Web Panel -> Cluster -> "Remove" button for "Other Node"

If you are unable to Remove, you can skip(3rd step) this step.

- 4) Install the same version of Ezeelogin on the new primary server

Download the same version of Ezeelogin package.

---

If the IP Address is different from old primary, migrate the license to new IP from Ezeelogin customer portal .It may display a warning message that the secondary node is having a primary license while installation, you can ignore the message.

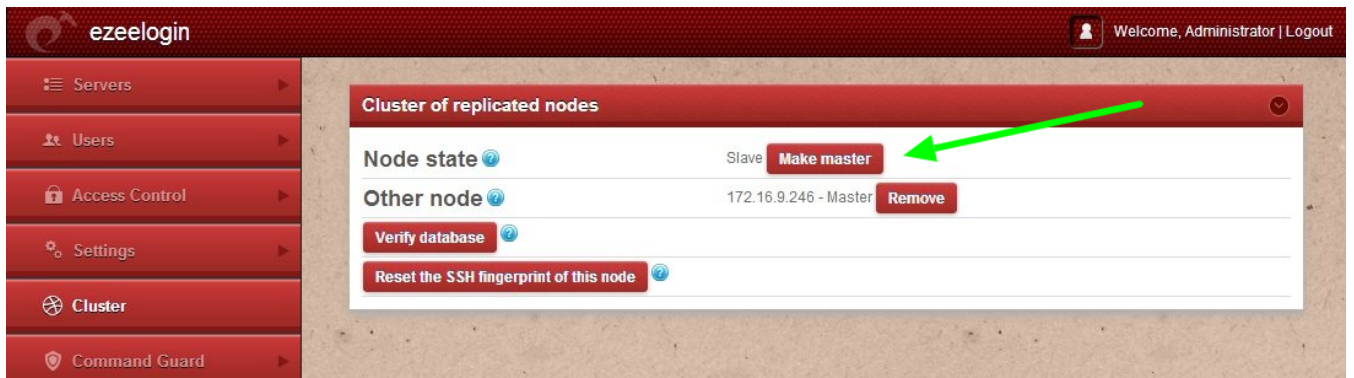

5) Execute the following command on primary server(current master) to grant access to ezeelogin database from secondary/slave node

```
ip_address of
```

6) Execute the following command

```
ip_address  
of secondary/slave node>
```

7) Login into the web gui of the current secondary and click on the cluster tab and click make master, so that it becomes master again.

## FAQ:

1. Can we disable the slave server since we are currently using only the master node?

Certainly, the choice to disable the slave server is yours, but keep a note that data synchronization between the master and slave servers will not occur if the slave is disabled. It is recommended to keep both servers running and synchronized for real-time data updates, as changes made to the master server will automatically sync with the slave server.
