## How to upgrade PHP in centos 7?

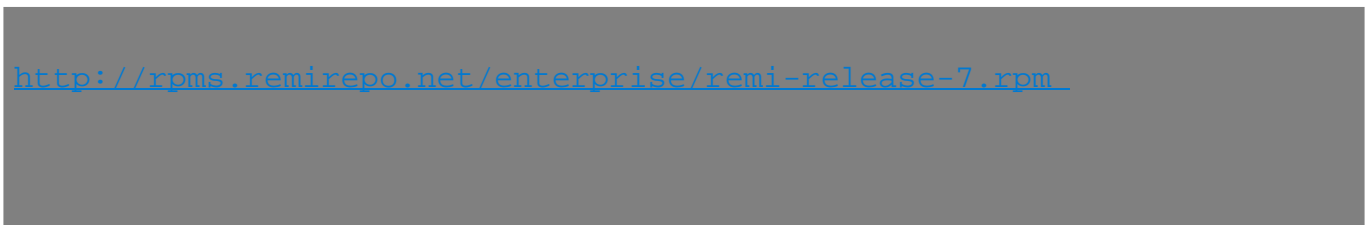

Enter the following commands on the terminal to upgrade php:

1. Turn on EPEL repo

2. Turn on remi-repo

<http://rpms.remirepo.net/enterprise/remi-release-7.rpm>

3. Install yum-util packages

4. Enable remi repo as per the desired php version

5. Finally install php7.X

## How to upgrade PHP to 7.2 on centos 6?

We do not recommend using Centos 6 as it is no longer supported by the Linux community with security patches, vulnerabilities, or bug fixes. You can follow the instructions to migrate to a centos 7 box and upgrade PHP in centos 7 after migration.

Follow the instruction to migrate to a new Centos 7 box

1. Run the script **/usr/local/sbin/backup\_ezlogin.php** on the current server to create the backup archive.

The backup archive would be created in **/var/ezlogin.xx.bin**

2. Spin up a new Centos 7 Vm and make sure to install the exact version of the packages such as PHP, web server, PHP modules, ioncube, Mysql etc.

Refer to the system requirements: <https://www.ezeelogin.com/kb/article.php?id=2&oid=2>

3. Issue a temporary license for the new VM. Contact the Ezeelogin support team to issue a temporary license for migration with your public IP of new Centos VM.

```
wget -qO- http://ezeelogin.com/myip
```

4. Move the executable **ezlogin.xx.bin** archive to the new Centos 7 server, and execute the **.bin** file.

```
sh ezlogin.xx.bin
```

Follow the on-screen instructions.

5. You can migrate your production license to the new centos7 box after confirming that everything working on your new machine. You can contact the ezeelogin support team for license migration.

6. You can follow the above instructions to upgrade PHP on Centos 7 and upgrade to PHP version to the latest version.

### **How to upgrade PHP in amazon-linux?**

1. Install the amazon-linux-extras package

2. Confirm that PHP 7.x is available in our Amazon Linux 2 machine

```
[ec2-user: ]$
```

3. Enable php7.4 by running the following command:

```
[ec2-user:~]$
```

4. Install PHP packages from the repository.

```
[ec2-user:~]$
```

```
[ec2-user:~]$
```

5. Confirm the PHP Version

```
[ec2-user:~]$
```
