How to fix: "EPROTO" Error after upgrading Node's version in RDP?

310 Vishnupriya August 28, 2024 Common Errors & Troubleshooting 3937

Resolving "EPROTO" Error Post Node Version Upgrade

Overview: This article discusses resolving protocol errors post Node.js updates by setting (--tls-min-v1.0) option, specifying TLS v1.0 for secure communication.

This error is usually seen after the Node version upgrade.

• If you encounter a protocol error after updating your Node version, simply include --tls-min-v1.0 in the Node.js command under Settings -> General -> Miscellaneous -> Node.js Command.

--tls-min-v1.0

This is a command-line option passed to Node.js. It instructs Node.js to use TLS version 1.0 as the minimum acceptable version for secure communication over HTTPS and other TLS-enabled protocols.
