

How to install node using npm and n module?

343 admin November 17, 2023 [General](#) 2820

Install node using npm and n module

1. Install npm

On centos 7

On Ubuntu 16/18 and Debian 10

On Ubuntu 20/22

```
root@localhost:~
```

```
root@localhost:~
```

2. Install n, Node's version manager:

If you are not using SSL, you need to set the repo to HTTP by running :

```
root@localhost:~
```

```
root@localhost:~ npm install -g n
```

3. Install node by running :

Add insecure to install without SSL:

```
root@localhost:~
```

For example: n --insecure

To install the latest version:

```
root@localhost:~ n latest
```

To install the corresponding version :

```
root@localhost:~
```

For example, root@localhost:~ n 19

To switch between multiple node versions you need to run the "n" command select the version using the up/down arrow keys and press Enter :

```
root@jumpserver:~# n
```

```
node/16.18.1  
o node/19.7.0
```

```
Use up/down arrow keys to select a version, return key to install, d to delete, q to quit
```
