

# How to transfer Ezeelogin SSH session logs recorded to a remote server ?

346 Manu Chacko July 25, 2024 [Features & Functionalities](#), [Technical](#) 2749

## Transfer Ezeelogin SSH session logs recorded to a remote server

**Overview:** This article describes steps to create a Linux system user on a remote server, set up SSH-key-based authentication, and transfer [SSH session logs](#) from an Ezeelogin Jumpserver using rsync.

### Step 1: Create a Linux System User

- If not already existing, create a Linux system user on the remote server where SSH session [logs](#) will be transferred.

You can skip this step if a Linux system user already exists on the remote machine.

- Add the user with the following command. You can replace the username "backup-user" with a username of your choice.

```
root@remote-server:~#useradd backup-user
```

### Step 2. Setup SSH-KEY-based authentication for passwordless authentication.

- 2.a.) Create an ssh key pair on the server using the following command on the Jumpserver.

```
root@jumpserver:~# ssh-keygen -m PEM -t rsa
Generating public/private rsa key pair.
Enter file in which to save the key (/root/.ssh/id_rsa):
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in /root/.ssh/id_rsa.
Your public key has been saved in /root/.ssh/id_rsa.pub.
The key fingerprint is:
SHA256:eUKBEDUlDVzQgCKT3QHBVwHHCH0IjWa8cDdNkRBrvZM root@jumpserver
The key's randomart image is:
```

```

----[RSA 2048]-----
|      =B#B/@%o      |
|      = @ @=B.o     |
|      B = o.         |
|      .o . o        |
|      S E           |
|      o .           |
|-----[SHA256]-----|

```

- Now, the public key has been saved in the file `/root/.ssh/id_rsa.pub`, and the private key in `/root/.ssh/id_rsa`

**2. b)** Paste the public key in the remote server user's "backup-user" authorized key file.

```

root@remote-server:~# vi /home/backup-user/.ssh/authorized_keys

```

- So that you can SSH to a remote server from the Jumpserver without a password.

Step 3. **Copy/sync logs** from the Ezeelogin Jumpserver to the remote server using the `rsync` command.

```

root@jumpserver:~# rsync -av /var/log/ezlogin backup-
user@10.10.10.1:/home/backup-user/

```

- If you want to copy a ssh user log file to the remote server, use the following command:

```
root@jumpserver:~#rsync -av  
/var/log/ezlogin/full/ezadm622/acer~test.centos2.com backup-  
user@10.10.10.1:/home/logs/
```

---
