

How to output mysql query results in csv format and view the reports in Excel sheets?

382 Vishnupriya May 10, 2022 [General](#) 3041

Generate report with User Name, Last Login Date and Roles of the Ezeelogin user and view the reports in Excel sheet

To display the details such as Ezeelogin Username, Last login at which the user has been logged in, and the Usergroups to which user belongs to in the Ezeelogin jump server:

1. Login to mysql

```
root@jumpserver:~#
```

2. The following query would display the username, last login and usergroups

3. You need to run the following query to export the details to `/var/lib/mysql-files/` and to view the generated reports in Excel sheet

To generate the reports of active users in the Ezeelogin gateway server and view in Excel sheet

1. Login to mysql

```
root@jumpserver:~ mysql -u root -p
mysql > use db_name;
```

2. The following query would display the active users in the Ezeelogin gateway server

To display the suspended users in the Ezeelogin gateway server, you need to change the status as 0 in the above query

3. You need to run the following query to export the details to `/var/lib/mysql-files/` and to view the generated reports in Excel sheet

You have to use the correct `db_name` and `dbprefix`. You can find it from `/usr/local/etc/ezlogin/ez.conf`
