How to upgrade PHP to 7.4 in centos 7?

Enter the following commands on the terminal to upgrade PHP:

1 . To install the latest **PHP 7**, you need to turn on EPEL and Remi repository.

```
root@gateway:~# yum install epel-release
```

```
root@gateway:~# yum install  http://rpms.remirepo.net/enterprise/remi-release-7.rpm
```

2. Next, you need to install yum-util packages

```
root@gateway:~# yum install yum-utils -y
```

3. Enable remi repo as per the desired PHP version, for **PHP 7.4**,

If you want to install PHP 7.3, you can use the following command, **root@gateway: ~ # yum-config-manager --enable remi-php73**

4. Now install **PHP 7.4** with all necessary modules with the command below.
