How to fix error (SAML): User with the email does not exist, but with the username exists

Overview: This article describes how to fix the "User with the email does not exist" [SAML](#) error by ensuring the email address matches between Ezeelogin and AWS SSO.

1. Refer below example of creating a new user in AWS SSO. Add user details in [AWS](#) or verify the user details.

The screenshot shows the AWS IAM console 'Add user' page. The 'User details' section is active, showing the following fields:

- Username*: steve
- Password: Send an email to the user with password setup instructions. [Learn more](#) Generate a one-time password that you can share with the user. [Learn more](#)
- Email address*: steve@ezeelogin.com
- Confirm email address*: steve@ezeelogin.com
- First name*: Steve
- Last name*: Irvin
- Display name*: Steve Irvin

Below the 'User details' section are three optional sections: Contact methods (optional), Job-related information (optional), and Address (optional). At the bottom right, there are 'Cancel' and 'Next: Groups' buttons. Red arrows point to the Username, Email address, and Next: Groups button.

Note: Provide the same Email address in both Ezeelogin and AWS SSO.

2. Refer to the below example of user edit in Ezeelogin.
