

Disable SAML /SSO Authentication on ezeelogin

416 Manu Chacko August 1, 2024 [Features & Functionalities](#) 2843

Switching ezeelogin authentication from SAML/SSO to internal

Overview: This article explains how to disable SAML/SSO authentication in Ezeelogin. Run the command `/usr/local/ezlogin/ez_queryrunner.php "update prefix_settings set value='internal' where name='web_auth';"` to disable SAML/SSO. Alternatively, you can allow internal authentication without disabling SAML by enabling "Allow Internal Authentication" under Settings >> Saml >> Advanced option. This will provide an internal auth URL for local users to log in without SAML authentication.

Run this command to disable SAML/ SSO Authentication.

```
/usr/local/ezlogin/ez_queryrunner.php "update prefix_settings set value='internal' where name='web_auth';"
```

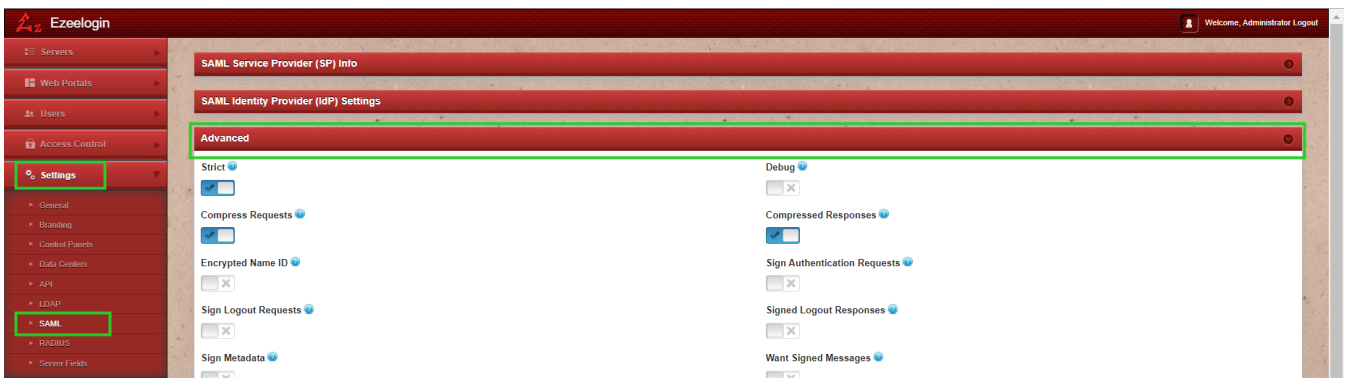

Alternative Method:

This is an alternative method where you can log in without saml authentication.

(Note: We are not disabling the Saml here instead users can login without Saml with the provided url.)

Under Settings -> Saml -> Advanced option -> Enable Allow Internal Authentication.

You will receive an internal auth URL from which you can log in without Saml authentication for local users.

The screenshot shows the Ezeelogin administration interface. On the left, a navigation menu includes 'Settings' and 'SAML'. The main content area displays various SAML configuration options, such as 'Want Encrypted Assertions', 'Want Signed Assertions', 'Relax Destination Validation', 'Reject Unsolicited Responses with InResponseTo', 'Name ID Format', 'Organization Display Name', 'Technical Contact Name', 'Support Contact Name', 'Signature Algorithm', 'Service Provider Certificate', 'New Service Provider Certificate', 'Want Encrypted Name ID', 'Want XML Validation', 'Match Destination Strictly', 'Lowercase URL Encoding', 'Organization Name', 'Organization URL', 'Technical Contact Email', 'Support Contact Email', 'Digest Algorithm', and 'Service Provider Private Key'. The 'Allow Internal Authentication' checkbox is checked, and its label is highlighted with a green box. Below it, the 'Internal Auth URL' is set to 'https://192.168.0.108/ezeelogin/index.php/auth/login/1'.

The screenshot shows the Ezeelogin login page. At the top, there is the Ezeelogin logo and a 'Welcome to Ezeelogin' message. Below this, there is a login form with two input fields: 'Username' and 'Password'. A 'Login' button is located at the bottom right of the form.
