

# Integrate Windows AD with CentOS using SSSD

430 Nesvin KN August 3, 2024 [Productivity & Efficiency Features](#) 5735

## How to integrate Windows AD with Centos 8 using SSSD

**Overview:** This article provides a comprehensive guide on integrating Windows AD with Ezeelogin and RHEL 8, covering steps for LDAP configuration, authentication setup, and backend integration.

### Note:

Ensure that the following ports on the RHEL host are open and accessible to the AD domain controllers.

DNS =53, LDAP =389, Kerberos 88 & 464, LDAP Global Catalog 3268 and NTP 123 (UDP)

### Note:

Verify that the system time on both systems is synchronized. This ensures that Kerberos is able to work correctly.

Refer article to [correct server time in Centos, RHEL, Ubuntu, SUSE](#)

**Step 1.** Login to Ezeelogin Web GUI -> open settings -> Ldap

[How to find base DN and bind RDN](#)

Add the details of LDAP configurations.

The screenshot shows the Ezeelogin web interface. The left sidebar contains a menu with the following items: Servers, Web Portals, Users, Access Control, Settings (highlighted with a green box), General, Branding, Control Panels, Data Centers, API, LDAP (highlighted with a green line), SAML, RADIUS, Server Fields, Cluster, Command Guard, Account, Help, and License. The main content area is titled 'LDAP Settings' and contains the following configuration fields:

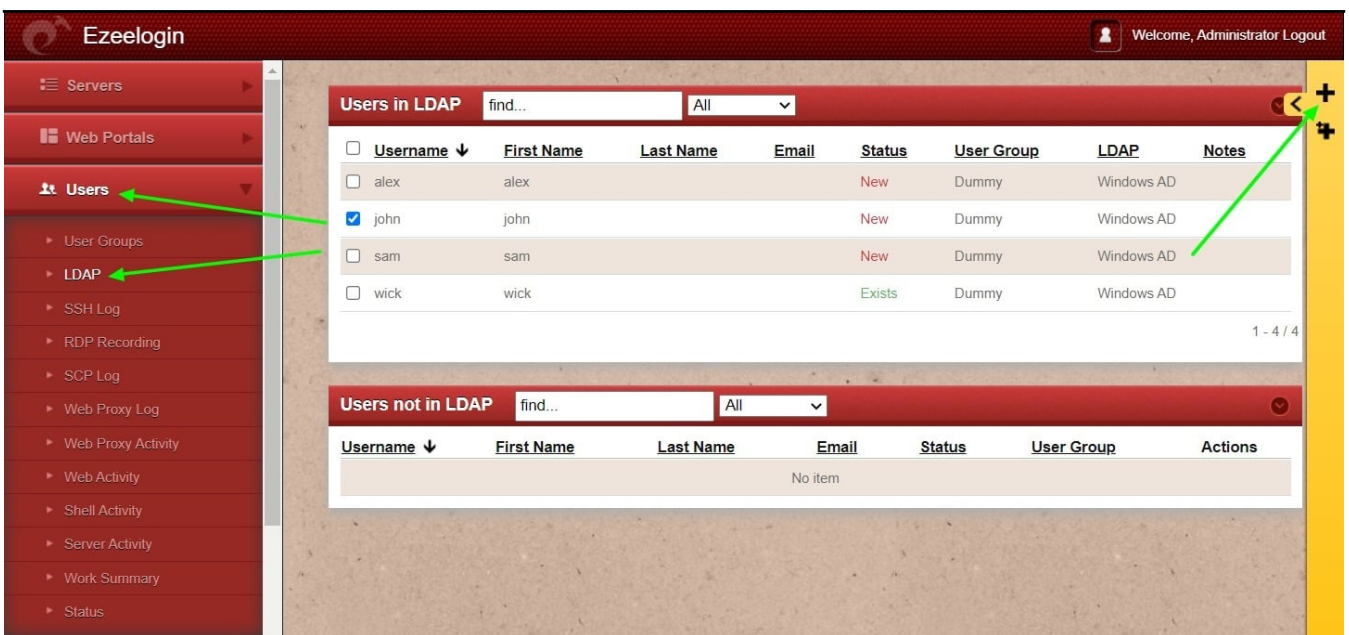

- Name: ezad
- URI(s): ldap://ezad.com
- Start TLS:
- Bind RDN: CN=Administrator,CN=Users,DC=ezad,DC=com
- UID Attribute: sAMAccountName
- First Name Attribute: givenName
- Email Attribute: mail
- Timeout: 10
- Active:
- Verify Certificate:
- Base DN: CN=Users,DC=ezad,DC=com
- Bind Password: .....
- Filter:
- Last Name Attribute: sn
- Group Attribute:
- Rank: 10
- Windows Active Directory:

At the bottom right of the form, there are 'Cancel' and 'Save' buttons.

**Step 2.** Go to **Settings -> General -> Authentication -> change Web Panel Authentication to LDAP**

**Step 3.** Select the LDAP users and click on the button to import users into Ezeelogin

You can confirm the imported LDAP users were listed in the Users tab in Ezeelogin GUI. You will be able to log in to Ezeelogin GUI with windows user credentials.

**Step 4.** Enable Security Code LDAP option from Settings > General > Authentication, if the user does not want to login to Ezeelogin GUI to set up a security code.

## Backend configuration to integrate Windows with RHEL 8

**Step 1.** Install required packages.

```
root@gateway ~]# yum install realmd sssd oddjob oddjob-mkhomedir adcli samba-common samba-common-tools krb5-workstation authselect-compat nscd -y
```

**Step 2.** Provide Windows IP and Windows domain name in hosts file.

```
root@gateway ~]# vim /etc/hosts

windows_ip windows_domain_name
```

**Step 3.** Provide Windows IP in resolv.conf to resolve and discover AD domain.

```
root@gateway ~]# vim /etc/resolv.conf

nameserver windows_ip
```

**Step 4.** Check if AD domain discovery is successful. Refer below example with ldapad.com

```
root@gateway ~]# realm discover ldapad.com
```

```
ldapad.com  
type: kerberos  
realm-name: LDAPAD.COM  
domain-name: ldapad.com  
configured: kerberos-member  
server-software: active-directory  
client-software: sssd  
required-package: oddjob  
required-package: oddjob-mkhomedir  
required-package: sssd  
required-package: adcli  
required-package: samba-common-tools  
login-formats: %U@ldapad.com  
login-policy: allow-realm-logins
```

**Step 5.** Join CentOS 8 in Active Directory domain. Replace Administrator with Windows admin account.

```
root@gateway ~]# realm join ldapad.com -U Administrator
```

```
Password for Administrator:
```

**Step 6.** Confirm joining successful with realm list. Refer below example.

```
root@gateway ~]# realm list  
ldapad.com  
type: kerberos  
realm-name: LDAPAD.COM  
domain-name: ldapad.com  
configured: kerberos-member  
server-software: active-directory  
client-software: sssd  
required-package: oddjob  
required-package: oddjob-mkhomedir  
required-package: sssd  
required-package: adcli  
required-package: samba-common-tools  
login-formats: %U@ldapad.com  
login-policy: allow-realm-logins
```

**Step 7.** After successful joining you will get below sssd.conf and you need to change use\_fully\_qualified\_names to False and shell to ezsh.

```
root@gateway ~]# vim /etc/sss/sss.conf

[sss]
domains = ldapad.com
config_file_version = 2
services = nss, pam

[domain/ldapad.com]
ad_domain = ldapad.com
krb5_realm = LDAPAD.COM
realmd_tags = manages-system joined-with-adcli
cache_credentials = True
id_provider = ad
krb5_store_password_if_offline = True
default_shell = /bin/bash
ldap_id_mapping = True
use_fully_qualified_names = False
fallback_homedir = /home/%u@%d
access_provider = ad

override_shell = /usr/local/bin/ezsh
```

**Step 8.** Restart sssd and nscd using the below commands.

```
root@gateway ~]# service sssd restart && service nscd restart
```

**Step 9.** Run id username /getent passwd username and see AD user details.

```
root@gateway ~]# id john
uid=1701601108(john) gid=1701600513(domain users) groups=1701600513(domain users)

root@gateway ~]# getent passwd john
john:*:1701601108:1701600513:john user:/home/john@ldapad.com:/usr/local/bin/ezsh
```

**Note:**

Use the below command to clear the cache of the user.

```
root@gateway ~]# sss_cache -u username
```

**Note:**

Verify Certificate feature is only available from **Ezeelogin version 7.35.0**.
