How to solve Authentication by SSH key failed in Ezeelogin?

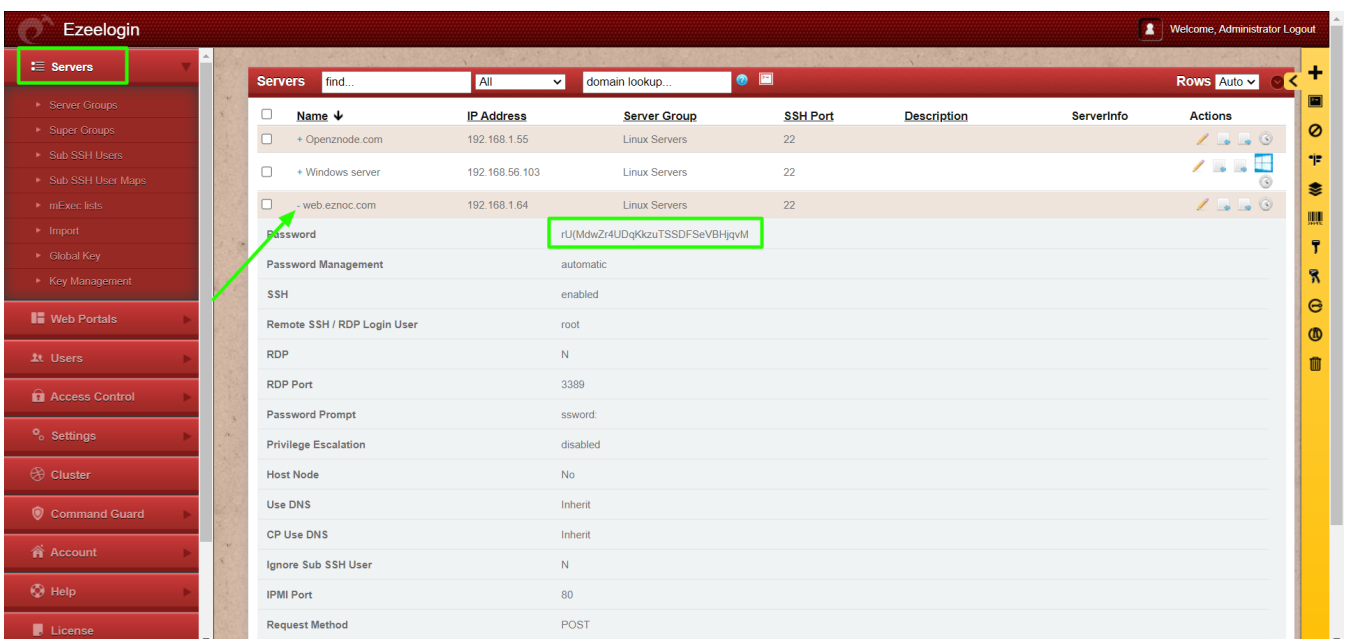

Overview: This article helps in resolving the "Authentication by SSH key failed/Authentication by password failed" error that occurs in the Ezeelogin backend when logging into a remote server.

Step 1: Make sure that you can manually SSH to the remote server from the Ezeelogin gateway server.

```
root@jumpserver:~# ssh user@remoteserver_ip or
hostname
```

Step 2: Verify the password has been entered correctly from Ezeelogin GUI and backend(ezsh). Refer below screenshots.

Step 2(A): To view password from Ezeelogin backend(ezsh), ssh into the jump server, select the server whose password needs to be viewed, and press the tab key.

```
Server details
Name           : web.eznoc.com
IP             : 192.168.1.64
SSH port       : 22
SSH User       : root
Password       : rU(MdwZr4UDqKkzuTSSDFSeVBHjqvM
Group          : Linux Servers

Press any key to continue...|
```

Step 3: While adding the server using a key, Make sure that the key is correct and does not contain any strange characters or space while copy-pasting.

Step 4: Check the error log of the remote server to which you are trying to login.

```
For Centos
:~# /var/log/secure

For Ubuntu
:~# /var/log/auth.log
```

Step 5: Check the [error logs](#)
