

What are the scenarios when the security code is prompted?

475 Vishnupriya August 14, 2024 [Getting Started](#) 3314

Security code for Ezsh shell

Overview: This article explains the use of the static security code in Ezsh shell, detailing when it's prompted, how to disable 2FA, and how to set or change the security code in the Ezeelogin user account.

1. The static security code is used only when 2FA is not enabled.

Note: Refer the following articles to disable 2fa

[How to disable 2FA from Ezeelogin GUI?](#)

[Clear two factor authentication](#)

2. The security code would be prompted when you ssh to the [Ezsh shell](#) after entering the Ezeelogin user password as shown in the screenshot below.

```
Enter security code: |
```

3. You can set or change the security code from the Ezeelogin user account under **Account -> Password**

The screenshot displays the Ezeelogin web interface. The top navigation bar includes the Ezeelogin logo and a user profile with the text 'Welcome, Administrator Logout'. The left sidebar contains a menu with items: Servers, Web Portals, Users, Access Control, Settings, Cluster, Command Guard, Account (highlighted), and a sub-menu under Account: Preferences, Theme, Key Bindings, Profile, Password (highlighted), SSH Log, RDP Recording, and SCP Log. The main content area shows a modal window titled 'Change password, security code, two factor secret'. This modal contains several input fields: 'New Password' with a 'Generate' button, 'Confirm Password', 'New Security Code' with a 'Generate' button, 'Confirm Security Code', 'SSH Key Passphrase', and 'Authorization Password'. At the bottom of the modal are 'Cancel' and 'Save' buttons. Two green arrows point from the 'Generate' buttons to the 'New Password' and 'Confirm Security Code' fields.

Note: It is mandatory to use security code or 2fa while ssh ing to the Ezsh shell.
