

Avoid Downtime when Ezeelogin server is down

504 Jisna Joseph January 23, 2025 [Common Errors & Troubleshooting](#) 1811

How to avoid downtime when your Ezeelogin server goes down?

Overview: This article outlines the steps to prevent downtime on an Ezeelogin server, including creating backups, implementing a master-slave configuration, and scheduling daily database backups to ensure high availability.

1. Always take a **backup** of your Ezeelogin Jump Server. Check out the following article to create a complete backup of Ezeelogin.

2. Maintain a **master-slave setup** to use the slave node when the master is down. Refer to the article below for setting up the slave for high availability.

[Install a slave/secondary node for high availability in the Ezeelogin jump server.](#)

3. Take an Ezeelogin **database backup** daily. Refer to the article below for instructions on how to take a database backup
