# Prompt username and password while accessing remote servers

## How to get prompts for username and password while accessing remote servers?

If a user needs username and password to be prompted while accessing a remote server make the username and password filed empty while adding the remote server.
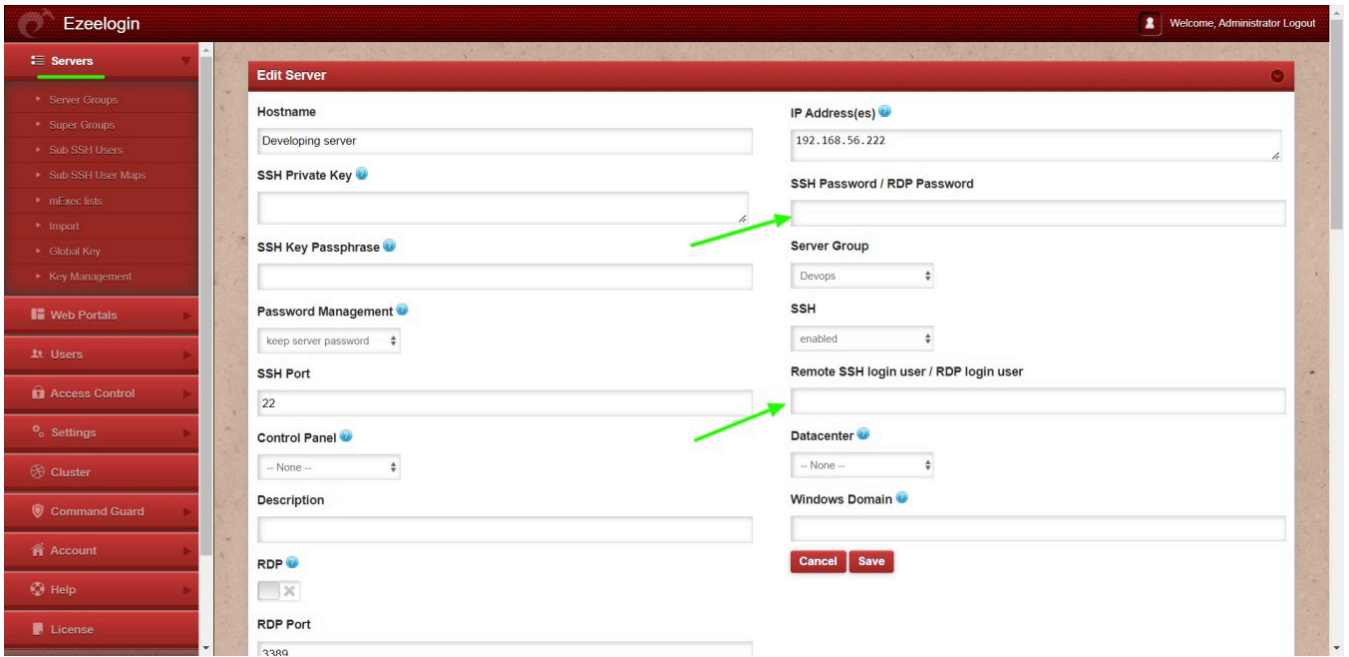

You can also confirm by entering the tab key. After keeping the fileds empty it will prompt for username and password while accessing the remote server

```
      Server details

Name                  : Developing server
IP                    : 192.168.56.222
SSH port              : 22
SSH User              :
Password              :
Group                 : Devops

         Press any key to continue...
```

```
Username: eric
Password:
```
