How to resolve issue while logging into cPanel/WHM with one click?

Synopsis: This article helps Ezeelogin gateway users to resolve issues while logging into cPanel/WHM.

Step 1: Ensure that you are able to manually login into the remote server with the current root password set in the Ezeelogin gateway. To view the current server password, access the backend (ezsh) and press the '[tab](#)' key on the selected server.

```
Server details
Name           : Cpanel/WHM server
IP             : 192.168.1.56
SSH port      : 22
SSH User       : root
Password      : rRVTAV2DEVg.KhYCgCpBfJeuVAG
Group         : Linux Servers

Press any key to continue...|
```

Step 2: Edit the server having problems and ensure that the control panel **username** and **password** are empty in the advanced section for Cpanel/WHM. This field is not required for cPpanel/WHM logins as the WHM login uses the root password.

The screenshot shows the Ezeelogin web interface. On the left is a sidebar menu with 'Servers' highlighted. The main content area is divided into two sections: 'Password Management' and 'Advanced'. The 'Advanced' section contains several configuration fields. Two green arrows point to the 'Control Panel User' and 'Control Panel Password' fields, indicating they are the focus of the current step.

Step 3: Ensure that outbound firewall ports 2087 / 2086 are open on the gateway server and inbound ports 2086/2087 is open on the target servers.

```
root@gateway:~# telnet <IP or hostname of cPanel > 2087
```

Refer article if you encounter the error `{"status":"success"}` while logging into cPanel/WHM.
