

Configure SMTP on Ezeelogin Jump server

542 Manu Chacko October 18, 2022 [Tweaks & Configuration](#) 1681

How to configure SMTP relay with Sendmail?

Install Sendmail

Ubuntu / Debian systems

Centos/RHEL

1. Create Authentication file.

Create a directory in /etc/mail directory

2. Create an authentication file and add the following. Replace the following email with your mail credentials.

```
AuthInfo: "U:root" "I:test@gmail.com" "P:PASSWORD"
```

Create a hash map file of the above authentication file as follows

3. Configure Sendmail

Add the following parameters into your sendmail.mc configuration file below the "MAILER_DEFINITIONS" definition.

```
AuthInfo: "U:root" "I:test@gmail.com" "P:PASSWORD" \
```

Save and re-build sendmail configuration

4. Restart the mail server

Now send a test email
