Error: No Server Group

567 Rakhi September 26, 2023 [Common Errors & Troubleshooting](#) 1001
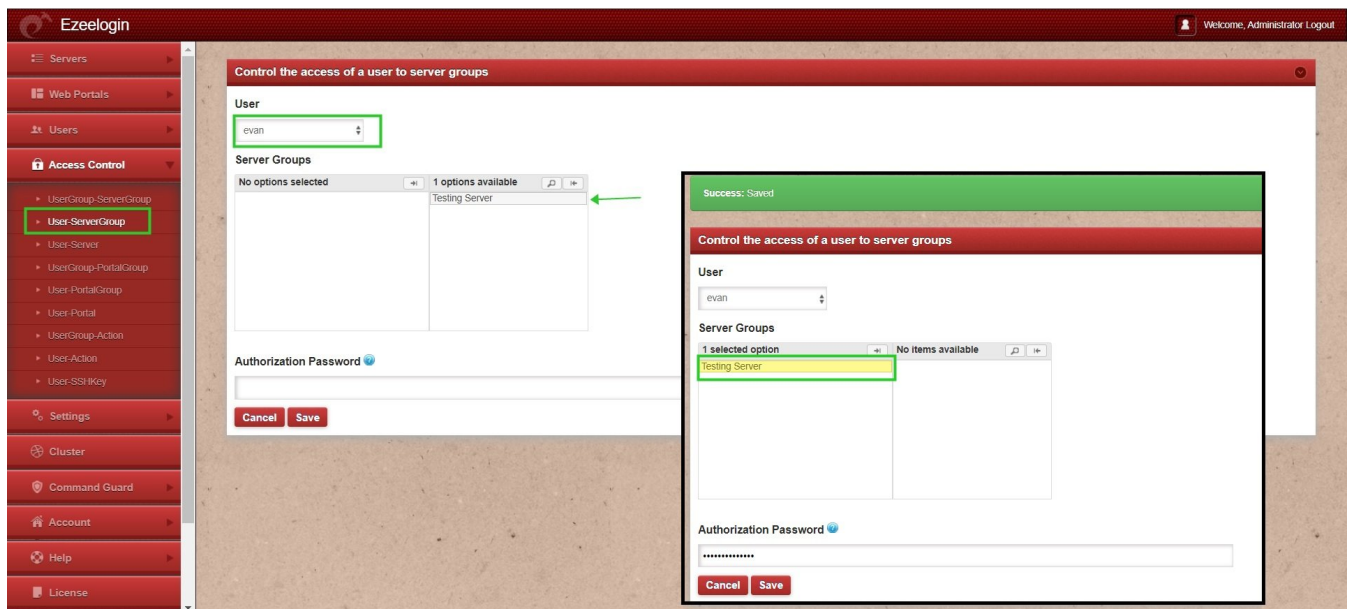

Error: No server group

GUI:
> Error: No server group

Backend:
> *No server group

To avoid the above message NO SERVER GROUP when using another user account that has been logged in, You need to provide *permission to access the server group* through the admin account for that user account under **Access Control > User-ServerGroup.**

Select the user 'x' and the server group you wish to give access.

While logging through the backend(or ssh) as a user you will receive the same issue as **NO SERVER GROUP**; after enabling the permission to the user from the above step, refresh (press =) and check again the user would be able to view the server groups.

*No server group

Go through the Role-based access you can give to users: [RBAC](https://www.ezeelogin.com/kb/article/error-no-server-group-567.html)
