## Downgrade PHP version 7.4 to 7.1 in Centos

**Overview:** This article helps Linux user to downgrade PHP from higher version(7.4) to lower version(7.1) on CentOS.

Additionally, these steps can be used to downgrade PHP to various versions on CentOS, including 7.4 to 7.3, 7.3 to 7.2, 7.2 to 7.1, and 7.2 to 7.0. Since some projects may not be compatible with the latest PHP versions, downgrading to an older version is sometimes necessary.

Follow the steps below to downgrade PHP from version 7.4 to 7.1 on CentOS.

**Step 1:** Before starting, check the version of PHP you are using.

```
[root@localhost ~]# php -v
PHP 7.4.33 (cli) (built: Dec 19 2022 13:32:43) ( NTS )
Copyright (c) The PHP Group
Zend Engine v3.4.0, Copyright (c) Zend Technologies
```

```
[root@localhost ~]# php -v
PHP 7.4.33 (cli) (built: Dec 19 2022 13:32:43) ( NTS )
Copyright (c) The PHP Group
Zend Engine v3.4.0, Copyright (c) Zend Technologies
```

**Step 2:** Remove the existing PHP 7.4 installation:

```
[root@localhost ~]# yum remove "php-*" -y
```

```
[root@localhost ~]# yum remove "php-*" -y
