

How to downgrade PHP 7.4 to 7.1 in Centos ?

572 Krishnaja February 20, 2023 [Common Errors & Troubleshooting](#) 2868

Downgrade PHP version 7.4 to 7.1 in Centos

In this article, we will learn to downgrade php version 7.4 to version 7.1 in centos. For this, we will use some commands which we have explained in the given an example. Using this command, we can also downgrade php version 7.3 to version 7.2 centos, php version 7.2 to version 7.1 centos, php version 7.2 to version 7.0 centos, centos version 7.4 to version 7.3 php. Sometimes, many projects do not support the latest versions of the software. That's why we require downgrading the php new version to the old version.

The following are the steps to downgrade the PHP 7.4 to the 7.1 version in Centos.

1.Before starting, check the version of PHP you are using.

```
[root@localhost ~]# php -v
PHP 7.4.33 (cli) (built: Dec 19 2022 13:32:43) ( NTS )
Copyright (c) The PHP Group
Zend Engine v3.4.0, Copyright (c) Zend Technologies
```

```
[root@localhost ~]# php -v
PHP 7.4.33 (cli) (built: Dec 19 2022 13:32:43) ( NTS )
Copyright (c) The PHP Group
Zend Engine v3.4.0, Copyright (c) Zend Technologies
```

2.Downgrade from PHP 7.4 to 7.1:

```
[root@localhost ~]# yum remove "php-*" -y
```

```
[root@localhost ~]# yum remove "php-*" -y
Failed to set locale, defaulting to C

=====
Removing:
php x86_64 7.4.33-2.el7.remi @remi-php74
php-cli x86_64 7.4.33-2.el7.remi @remi-php74
php-common x86_64 7.4.33-2.el7.remi @remi-php74
php-gd x86_64 7.4.33-2.el7.remi @remi-php74
php-json x86_64 7.4.33-2.el7.remi @remi-php74
```

3. Disable the php 7.4v and enable the php7.1v. Install the php modules of 7.1v as well.

```
[root@localhost ~]# yum --disablerepo=remi-php74 --enablerepo=remi-
php71 install php php-gd php-mbstring php-mysql php-curl php-mcrypt
```

```
[root@localhost ~]# yum --disablerepo=remi-php74 --enablerepo=remi-php71 install php php-gd php-mbstring php-mysql php-c
url php-mcrypt
