

# Authentication by key or password not supported

603 Nesvin KN March 8, 2024 [Common Errors & Troubleshooting](#) 1468

How to fix **Authentication by key or password not supported** while trying to login to remote servers?

```
ubuntu.server
```

```
Authentication by key not supported!  
Authentication by password not supported
```

```
Server: ubuntu.server, port: 22
```

```
Press any key to continue...
```

1. Manually login to the remote server and run the below command to **check the password and key-based authentication**.

2. Change password or key-based authentication to **yes** according to the authentication method you are planning to use.

3. After changing the authentication, try to login to the remote server from Ezeelogin and confirm it's working fine.
