Authentication by key or password not supported

603 Nesvin KN March 8, 2024 [Common Errors & Troubleshooting](#) 1310

How to fix **Authentication by key or password not supported** while trying to login to remote servers?

```
ubuntu.server

Authentication by key not supported!
Authentication by password not supported

Server: ubuntu.server, port: 22

Press any key to continue...
```

```
Authentication by key not supported!
Authentication by password not supported
```

1. Manually login to the remote server and run the below command to **check the password and key-based authentication**.

```
root@remote-server ~]# cat /etc/ssh/sshd_config | grep -i
"PubkeyAuthentication|PasswordAuthentication"

PasswordAuthentication no
PubkeyAuthentication no
```

2. Change password or key-based authentication to **yes** according to the authentication method you are planning to use.

```
root@remote-server ~]# vim /etc/ssh/sshd_config

PasswordAuthentication yes
PubkeyAuthentication yes

root@remote-server ~]# systemctl restart sshd
```

3. After changing the authentication, try to login to the remote server from Ezeelogin and confirm it's working fine.
