Creating usergroup and granting SSH access to the usergroup

610 Jisna Joseph November 30, 2023 Features & Functionalities 1171

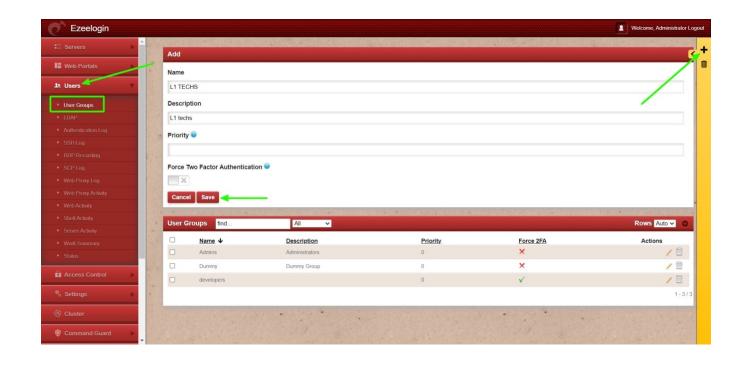

How to create user groups and grant SSH access to the user group?

What is a user group?

User groups consist of users who share common characteristics and are identified by a specific group name. These group names are utilized in <u>Access Control</u> to authorize or restrict access to different servers, features, and other parameters.

How to create a user group?

To create a new user group Navigate to Users->User Groups->Add.

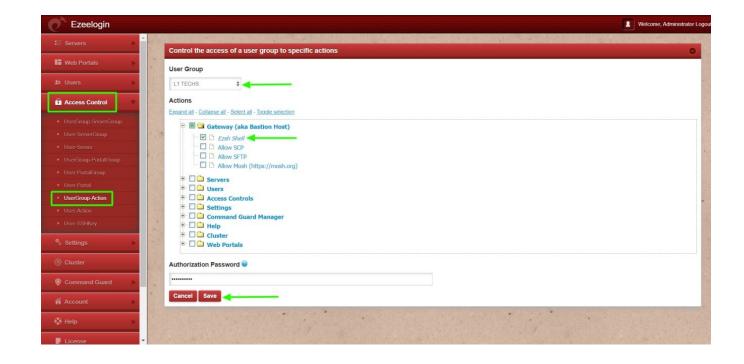

You also have the option to activate mandatory <u>Two-Factor</u>

<u>Authentication</u> (2FA) selectively for <u>particular user groups</u> based on specific requirements.

How to grant SSH access to a particular user group?

To grant SSH Access (<u>Ezsh</u>) for a particular user group Navigate to **Access Control->UserGroup Action-> Actions->Ezsh** Shell as shown below

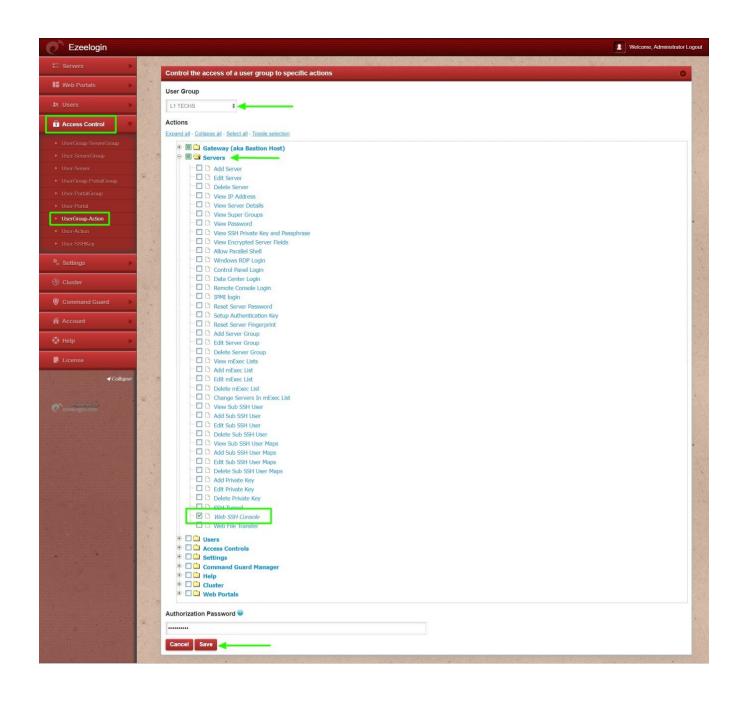

To enable SSH Access via web browser for a particular Usergroup you need to grant the privilege to access the <u>web shell feature</u>.

Grant it as follows.

Access Control->UserGroup-Action->select user group->Servers->web ssh Console

The web shell feature allows you to establish an SSH connection through a web browser without requiring an SSH terminal.

Web Shell will work only if the web interface is accessed via HTTPS and uses 2FA to log in. Refer to Enforce 2FA or Enable Google 2FA and install SSL Certificates and Enforce Https
