

## Change the authentication method to use only password in Ezeelogin

622 Nesvin KN April 29, 2024 [Common Errors & Troubleshooting](#) 845

How do I change the authentication method to use only password to remote servers added in Ezeelogin?

The following steps will clear the global key saved on the remote server and all private keys stored in Ezeelogin.

After completing all these steps and attempting to log in to the remote server, the authentication method used will be **password-based**.

Replace the **private key ID** with **zero** to unassign the saved private key for a server or server group.

It is recommended to use key-based authentication for remote servers accessed through Ezeelogin.

If both password and key are saved for authenticating to remote servers from Ezeelogin, the key will be used by default since it offers better security.

The priority of authentication methods used in Ezeelogin is as follows:

1. [Key saved while adding the server \(SSH Private Key\)](#).

2. [Saved private key stored in key management.](#)
3. [Global key \(Ezeelogin key\).](#)
4. Password-based authentication, which is the least preferred method.

## How to clear Ezeelogin public key (Global Key) from remote servers?

- How to clear Ezeelogin public key (Global Key) for a single remote server?

Login to the remote server and run the below command to remove only the global key.

- How to clear Ezeelogin public key (Global Key) for a server group?
