How to Integrate Azure Active Directory Domain Service with LDAPS

Overview: This article helps to integrate Azure active directory domain service with LDAPS

Refer article to [enable LDAPS on Azure AD and integrate it into your application](#)

Step 1: Login to the Web GUI, navigate to **settings** > **Ldap** and add the details of LDAP configurations as follows.

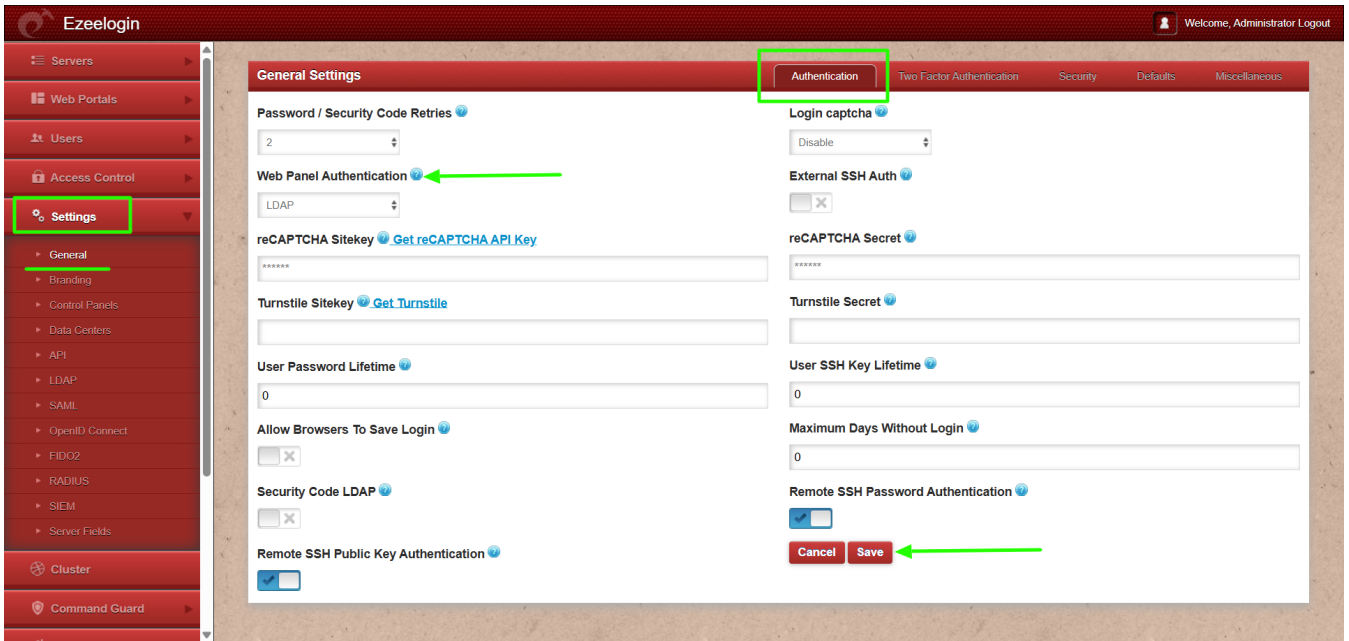

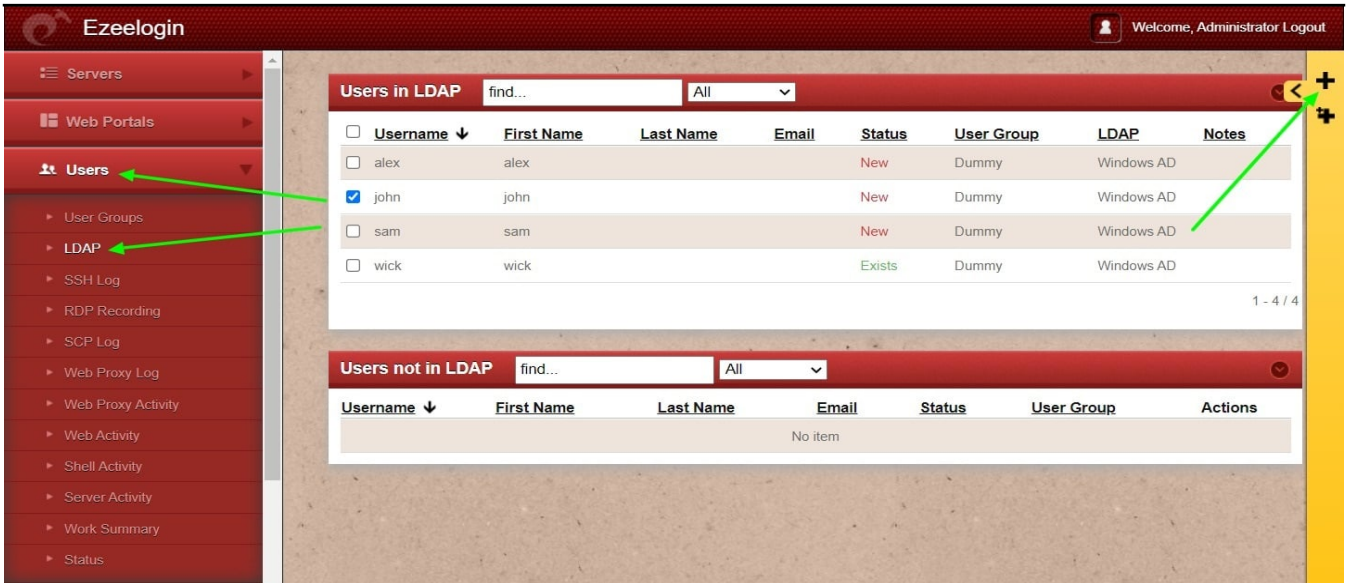

Step 2: Navigate to **Settings** -> **General** -> **Authentication** -> change **Web Panel Authentication to LDAP** and save.

Step 3: Enable Auto Create User from **web GUI** -> **Settings** -> **General** -> **Security** -> **Enable Auto Create User,** so the user will automatically created after successful authentication from Azure AD.
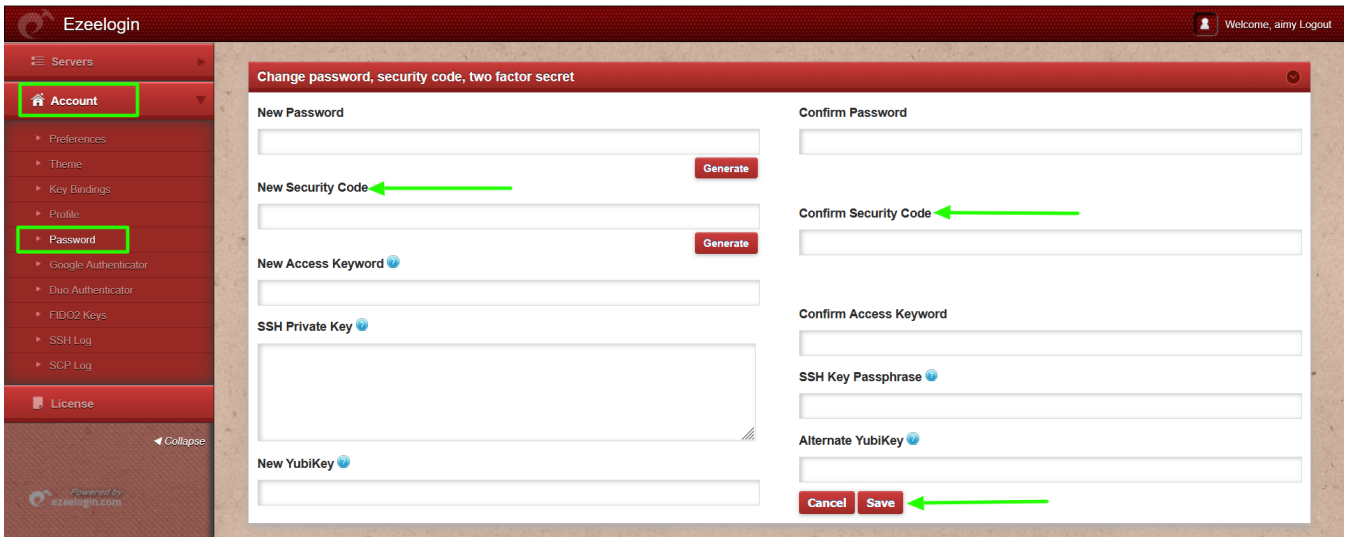

**Step 4:** Navigate to **Users** -> **LDAP** and click on the '**+**' button to import users into Ezeelogin.

Step 5: The imported LDAP users can be viewed under the users tab in the web GUI. You will be able to log in to web GUI with Azure AD user credentials.
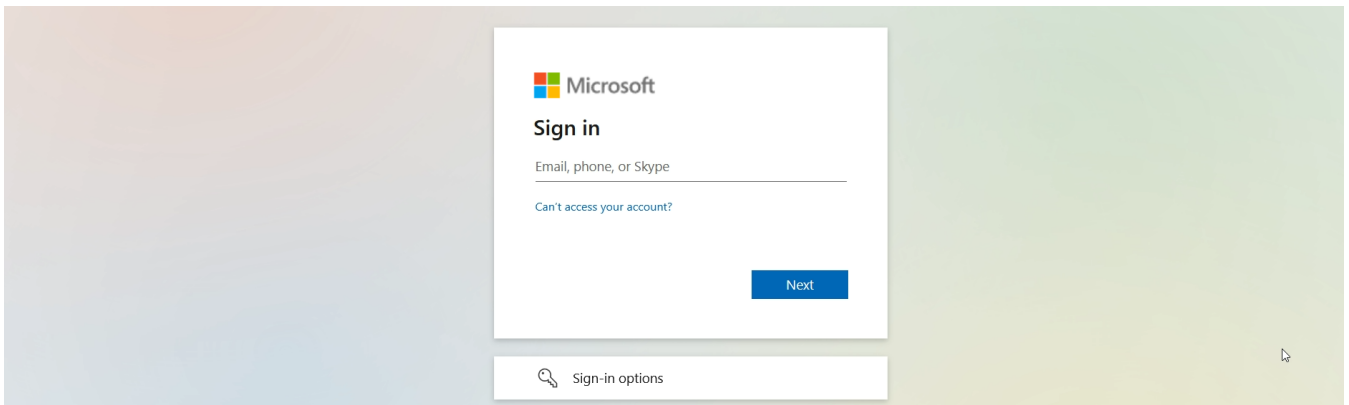

Step 6: After logging with Azure AD user credentials set up security code for the user under **Account** -> **Password** -> **New Security Code**.

Step 7: Enable the **Security Code LDAP** option under **Settings** -> **General** -> **Authentication** if the user prefers not to log in to the web GUI to set up a security code.
