

# Reset remote user password and update it in Ezeelogin

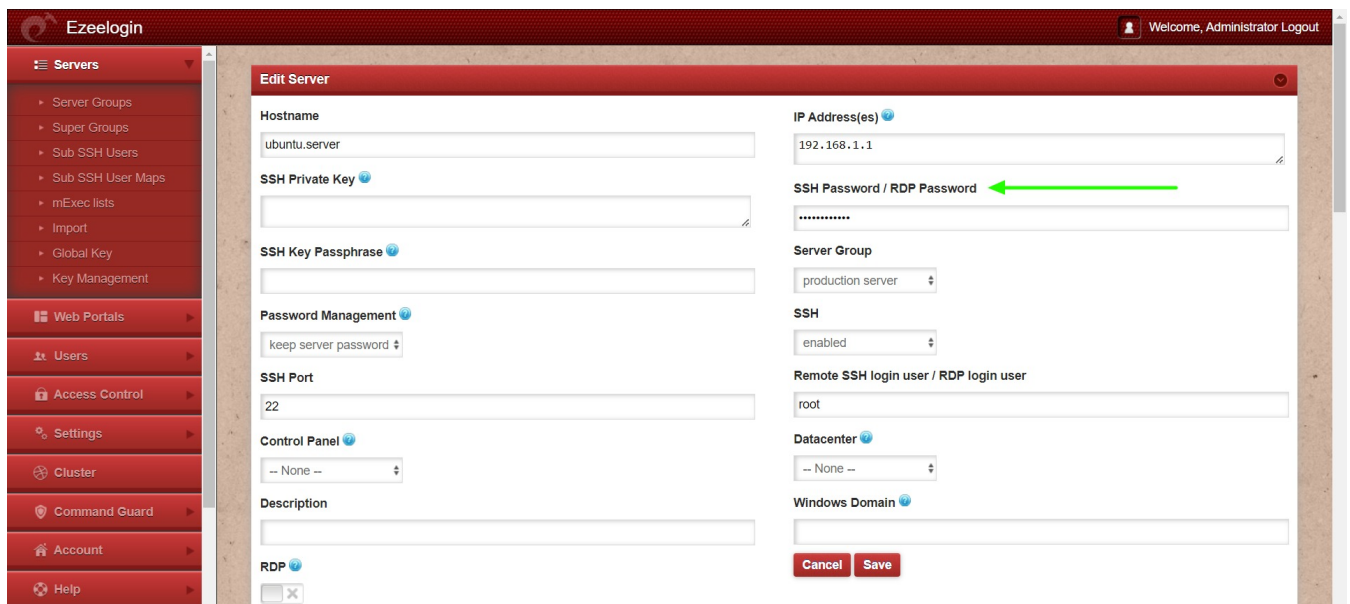

630 Nesvin KN December 5, 2023 [General](#) 1064

## How to reset the user password on a remote server and update it in Ezeelogin?

### How to reset the user password of a remote server and update it?

1. Log in to the remote server and execute the following command. It will prompt you for a password, enter the new password to update it.

2. Login to Ezeelogin GUI and update the new password in the SSH password field.

### How to reset the user password on all remote servers and update it?

1. Login to the ezsh shell and run the below command in the **parallel shell** to update the password for a user in the server group. Replace your username and password.

```
[group:production server]# echo 'username:password' | sudo chpasswd
```

2. Export the server list using the command below and enter the super admin's password when prompted.

```
Enter the Ezeelogin administrator password:
```

3. Extract only the necessary fields from the exported server list file using the following command.

4. Create a Bash script to update new passwords for all servers. Replace the API URL, API secret, and password variables with the correct values.

Refer detailed article to [add/delete/update servers in GUI using Ezeelogin API](#).

5. Execute the script, and the new password will be updated on all remote servers.
