

Setup public key in remote server

631 Nesvin KN June 11, 2024 [Features & Functionalities](#) 1466

How to setup Ezeelogin public key (global key) in the remote server?

Synopsis: This article will help the Ezeelogin user to add the Ezeelogin public key (global key) to remote servers manually and using the GUI.

[Ezeelogin's public key or global key](#) is used to SSH into the remote servers. The private key corresponding to the public key is encrypted and stored in Ezeelogin and cannot be retrieved.

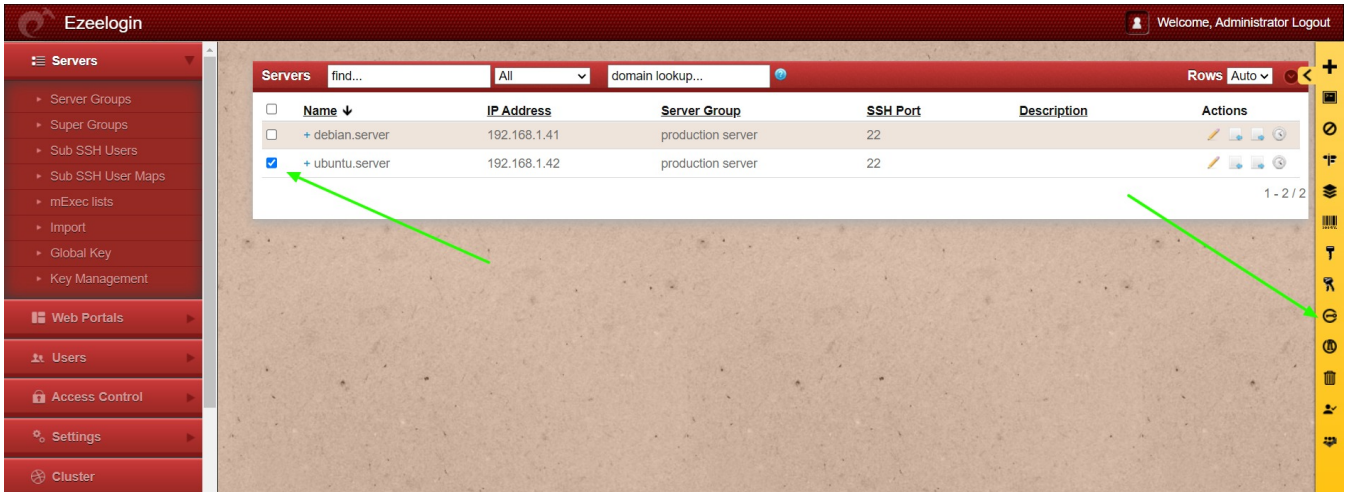

1. How to setup Ezeelogin public key to remote server manually?

Login to remote server manually and append global key to users `authorized_keys`.

2. How to setup Ezeelogin public key to a single remote server using GUI?

Login to **Ezeelogin GUI** -> select the **remote server** -> click on **Setup SSH key on selected server** to copy Ezeelogin public key to that single server.

Success: Public key was successfully copied to the remote server.

Failed: Public key failed to copy to the remote server. (Verify the server logins and try again)

3. How to setup Ezeelogin public key to all remote servers using GUI?

Login to **Ezeelogin GUI** -> click on **Setup SSH key on all servers** to copy Ezeelogin public key to all remote server.

Ezeelogin interface showing a list of servers. The table displays the following data:

| Name | IP Address | Server Group | SSH Port | Description | Actions |
|---|--------------|-------------------|----------|-------------|---------|
| + debian.server | 192.168.1.41 | production server | 22 | | |
| <input checked="" type="checkbox"/> + ubuntu.server | 192.168.1.42 | production server | 22 | | |

Ezeelogin interface showing a modal window titled "Resetting server keys... [completed]". The window displays the following data:

| Server | Status |
|---------------|---------|
| debian.server | Failed |
| ubuntu.server | Success |
