

# List user and subssh user mapped

647 Nesvin KN October 31, 2023 [Productivity & Efficiency Features](#) 1086

How to list the usernames and the corresponding subssh users mapped individually?

1. Find the database and table name using the below command.

2. Login to the MySQL server and run the query below to list the usernames and the corresponding subssh users mapped individually from the user edit.

Execute the following command and provide the MySQL root password when prompted to get the list with a single command.
