

List user and subssh user mapped

647 Nesvin KN October 31, 2023 [Productivity & Efficiency Features](#) 831

How to list the usernames and the corresponding subssh users mapped individually?

1. Find the database and table name using the below command.

```
root@gateway ~]# cat /usr/local/etc/ezlogin/ez.conf | grep -i
"db_name|db_prefix"

db_name ezlogin_wupluh
db_prefix btu_
```

2. Login to the MySQL server and run the query below to list the usernames and the corresponding subssh users mapped individually from the user edit.

```
root@gateway ~]# mysql -u root -p

Enter password:

mysql> use ezlogin_wupluh;

mysql> select u.username as user, s.username as sub_ssh_user from
btu_users as u join btu_ssh_users as s on u.ssh_user_id = s.id;

+-----+-----+
| user  | sub_ssh_user |
+-----+-----+
| alex  | john  |
| tony  | nick  |
+-----+-----+
2 rows in set (0.00 sec)
```

Execute the following command and provide the MySQL root password when prompted to get the list with a single command.

```
root@gateway ~]# mysql -u root -p -e "USE $(grep -oP 'db_names+KS+'
/usr/local/etc/ezlogin/ez.conf);select u.username as user, s.username
as sub_ssh_user from $(grep -oP 'db_prefixs+KS+'
/usr/local/etc/ezlogin/ez.conf)users as u join $(grep -oP
'db_prefixs+KS+' /usr/local/etc/ezlogin/ez.conf)ssh_users as s on
```

```
u.ssh_user_id = s.id;"
```

Enter password:

```
+-----+-----+
| user  | sub_ssh_user |
+-----+-----+
| alex  | john  |
| tony  | nick  |
+-----+-----+
```
