Cancel Update

2. Upon changing the IP, proceed to upgrade your Ezeelogin on the Master node. If your current Ezeelogin version is not the latest, download the latest version from the [billing portal](#) based on your PHP version.

If you are already on latest version, you can upgrade to the same version itself.

3. Run the following command to upgrade your Master node after downloading the package. Replace **dbspass** with MySQL root password

4. Run the following command on your master node after upgrade

5. Download the same version of Ezeelogin on the Slave node as master node. After downloading run the following command to update the secondary with a new IP address.

### How to switch the IPs from public to private in a master/slave installation?

You can connect master and slave using both public and private IPs. Since private IP is generally faster than public IP, you can switch to the private IP.

Follow below steps if you want to switch the IPs from public to private IPs.

1. Upgrade your Ezeelogin on the Master node, If you are not on the latest version of Ezeelogin. Download the latest version corresponding to your PHP version from your [billig portal](#).

Run the following command to upgrade your Master node after downloading the package. Replace **dbspass** with MySQL root password

2. Run the following command on your master node after upgrade.

3. Download the same version of Ezeelogin on the Slave node as master node. After downloading run the following command to update the secondary with a Private IP address.
