

Add AD as LDAP with non-administrator user

665 Nesvin KN April 30, 2024 [Productivity & Efficiency Features](#) 664

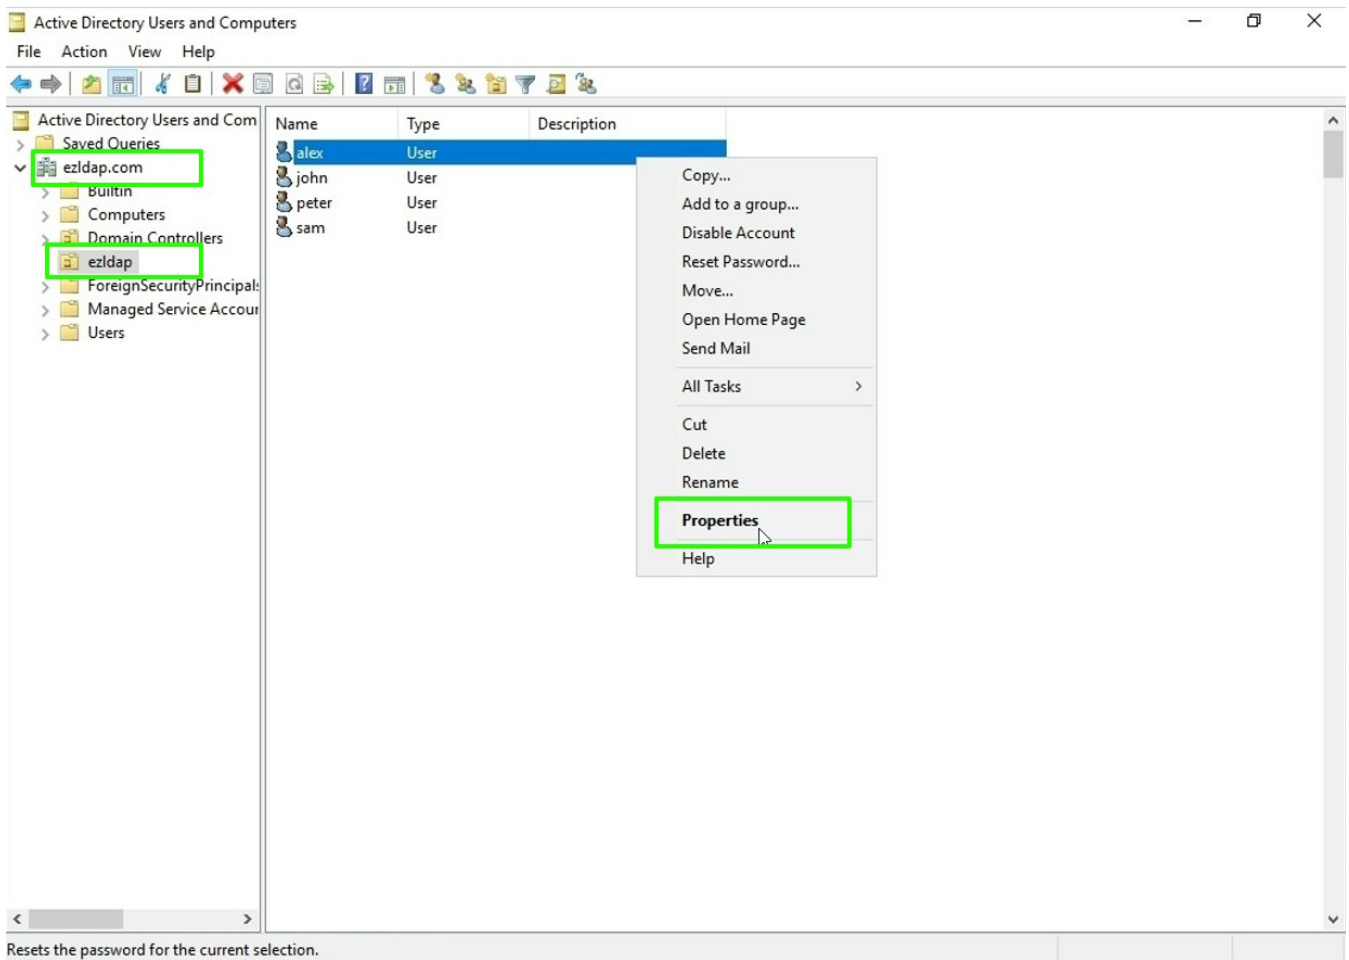

How to add Active Directory as LDAP with non-administrator user?

Assign administrative privileges to the user in Active Directory and this will allow the user to bind AD LDAP with Ezeelgin.

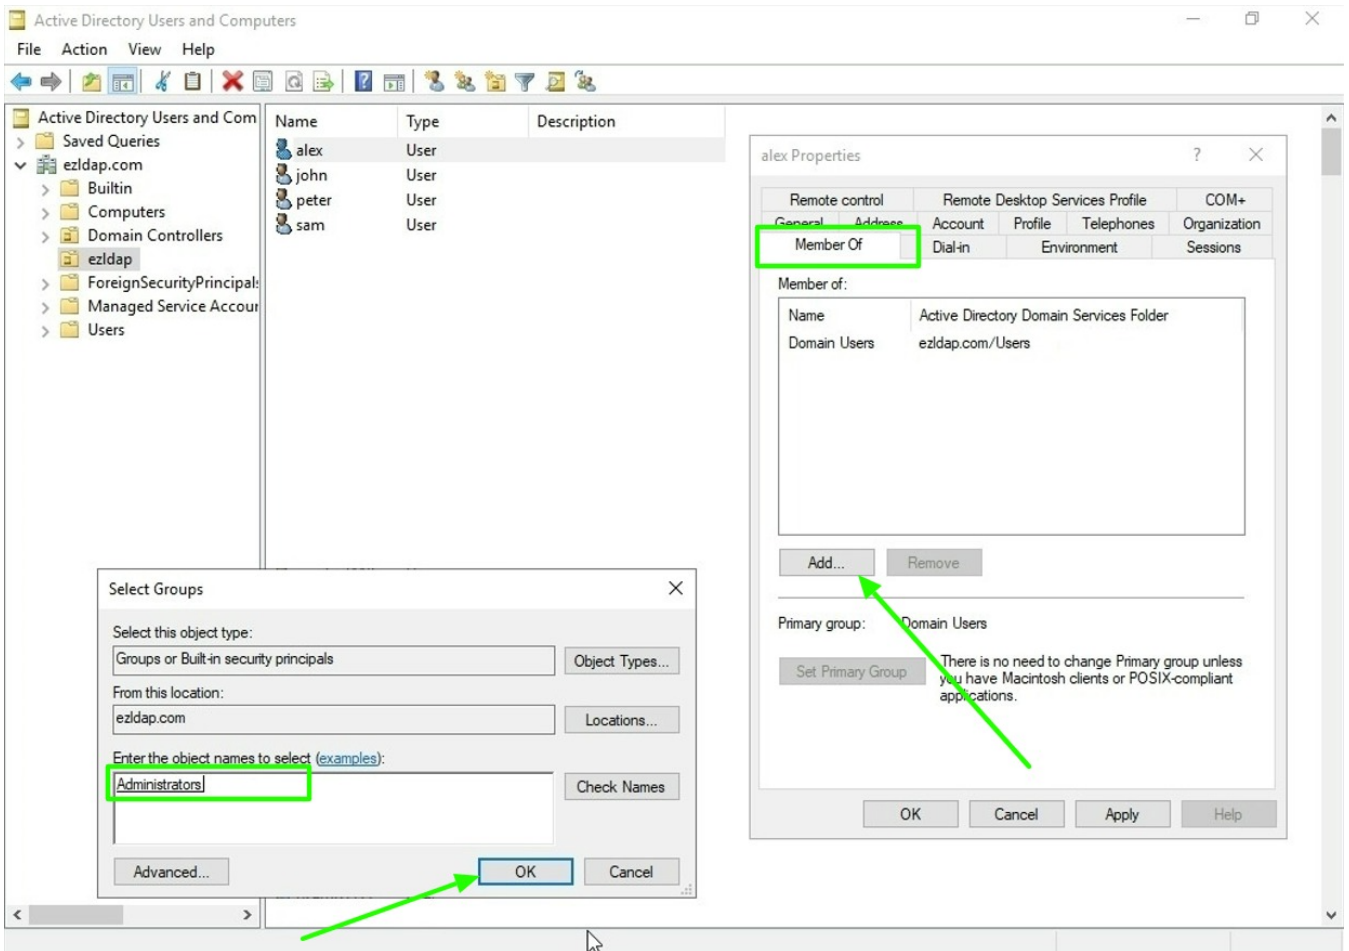

1. Login to AD -> Server Manager -> Tools -> Active Directory Users and Computers.

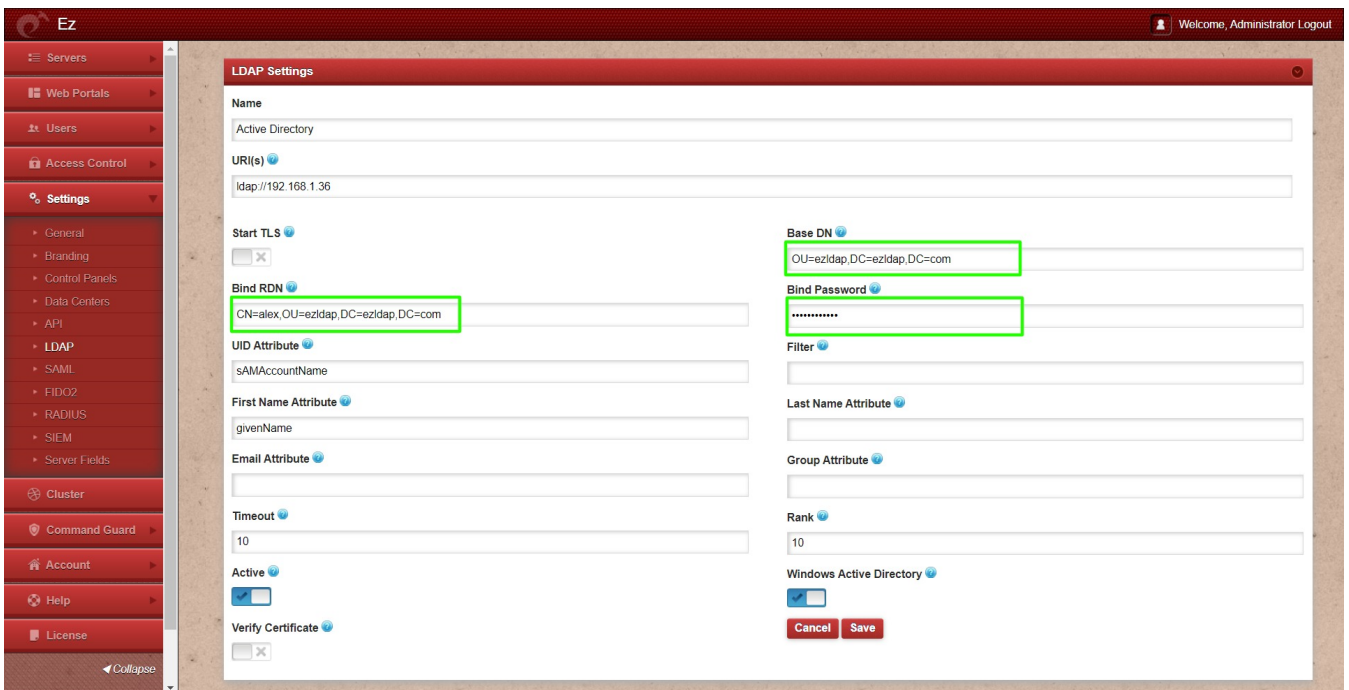

2. In Active Directory Users and Computers navigate to the domain name-> right-click on the user -> properties.

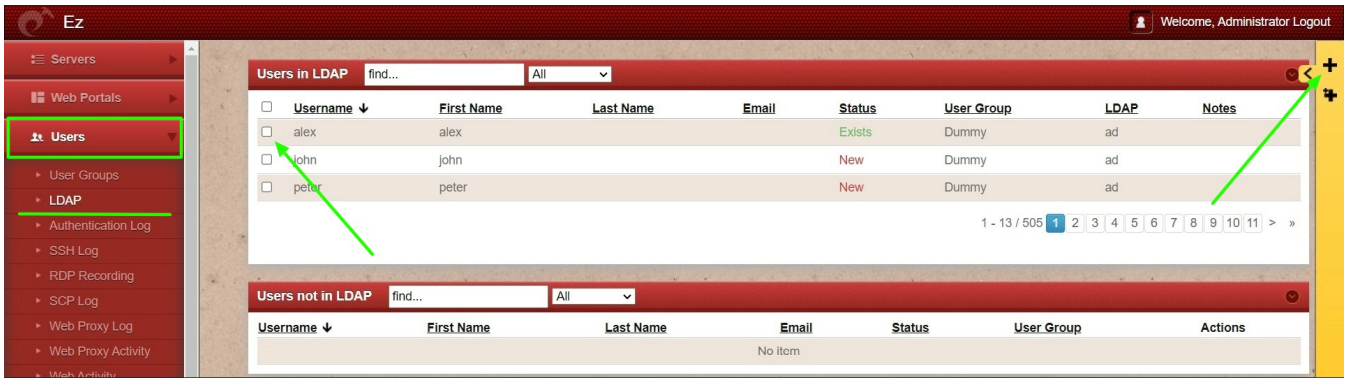

3. Click on **Member Of** -> **Add** -> Enter **Administrator** in **object name field** -> click **Ok** and **save the privilege**.

4. Add the LDAP setting with the new **user distinguish name** and **password** with the **search base** and save the settings.

5. Click on the LDAP in the Users tab to list all the users from AD based on the search base specified in LDAP settings.
