

How to implement themes for your interface design

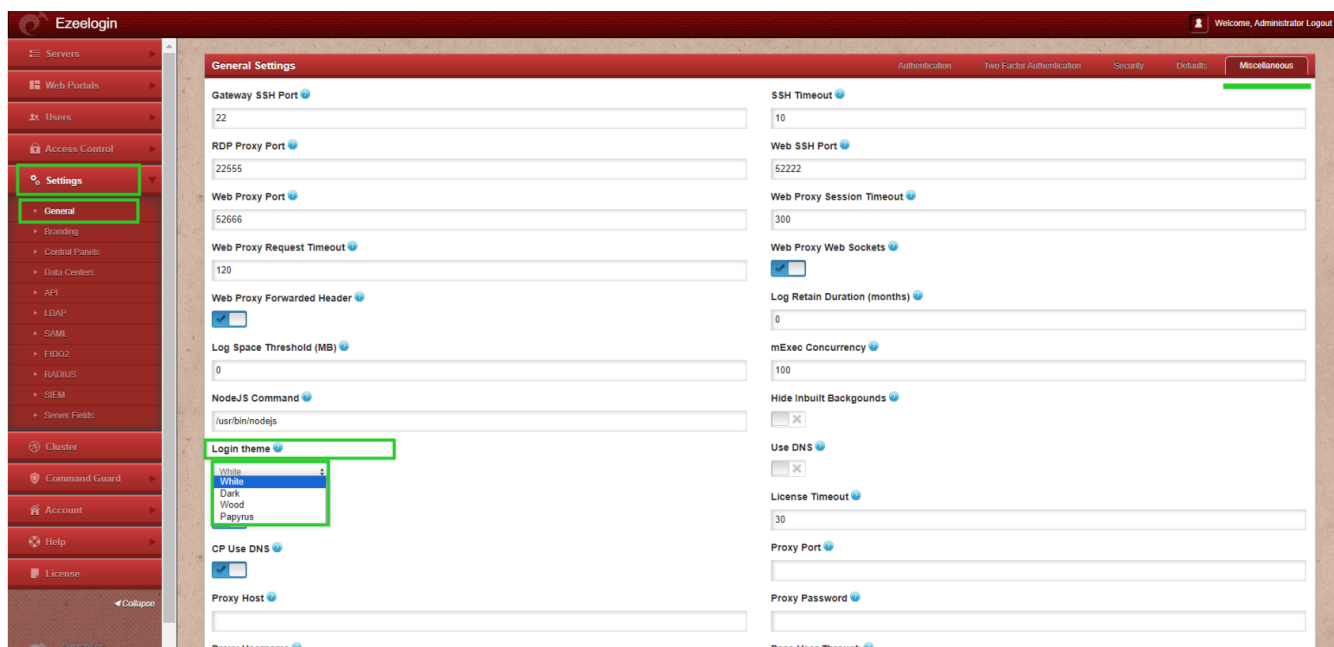

691 Rakhi March 29, 2024 [Features & Functionalities](#) 329

How can you access the login page themes, background, and GUI themes feature in the web GUI?

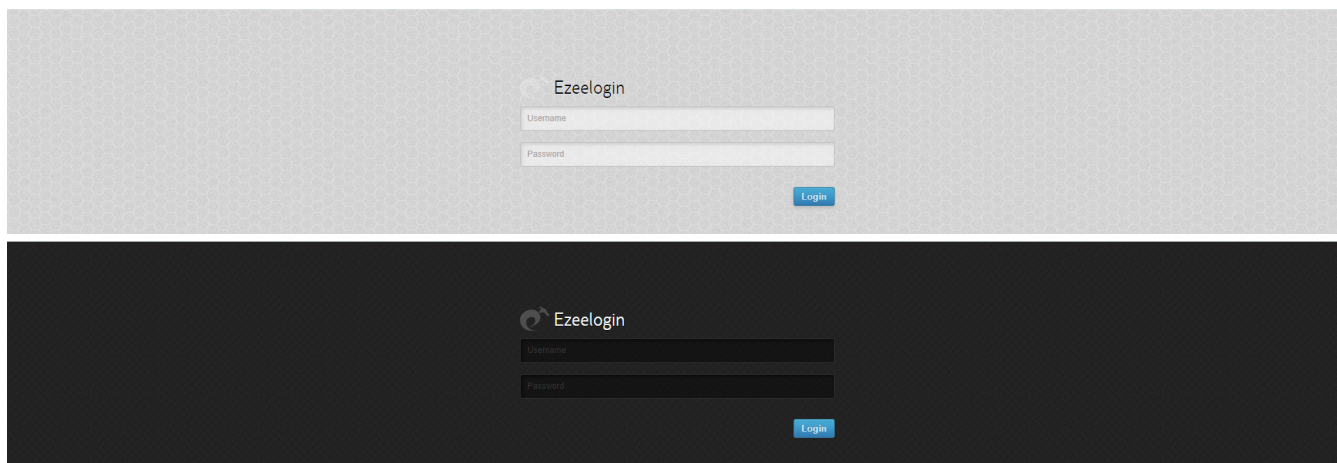

Step 1: Follow the below steps to add a theme to the login page of ezeelogin

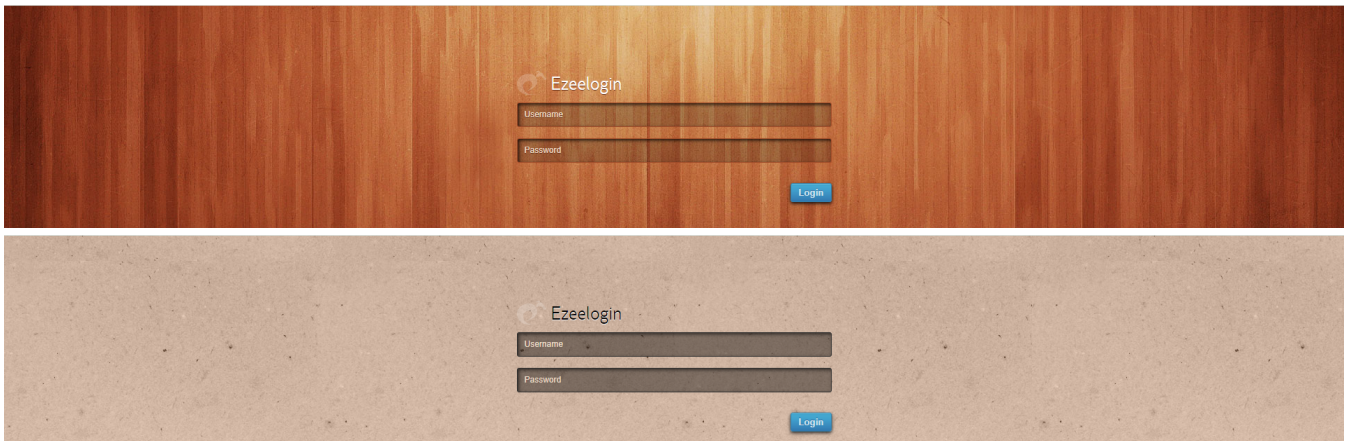

The following steps would reflect globally on all users.

Navigate to **Settings > General > Miscellaneous > Login theme parameter** > Choose any of the options given (**white/Dark/Wood/Papyrus**) and Save it.

Refer to the screenshots for login theme interfaces:

Step 2: A sequential guide to adding a theme to the web GUI pages of Ezeelogin.

Navigate to **Account > Theme** > Choose the listed themes and set them as default. (Smooth, Papyrus, sky, white, wood, Green glow)

Setting them as the default will apply changes globally to all users.

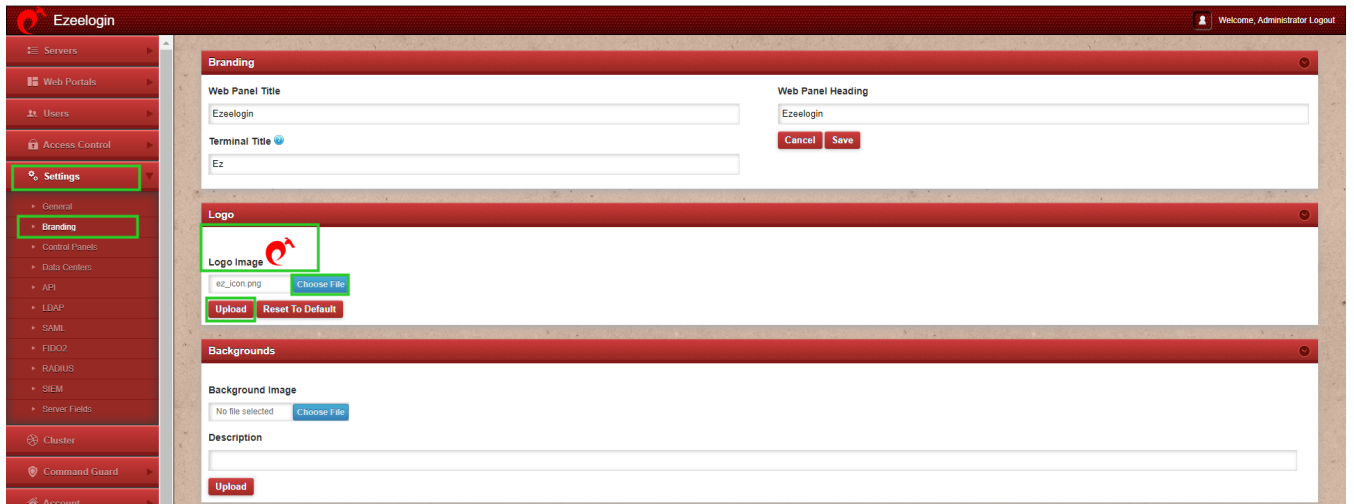

If you opt not to set it as the default theme, changes will only affect individual users.

Step 3: You also have the option to incorporate a **logo into the Ezeelogin Panel** and include your brand name for branding purposes.

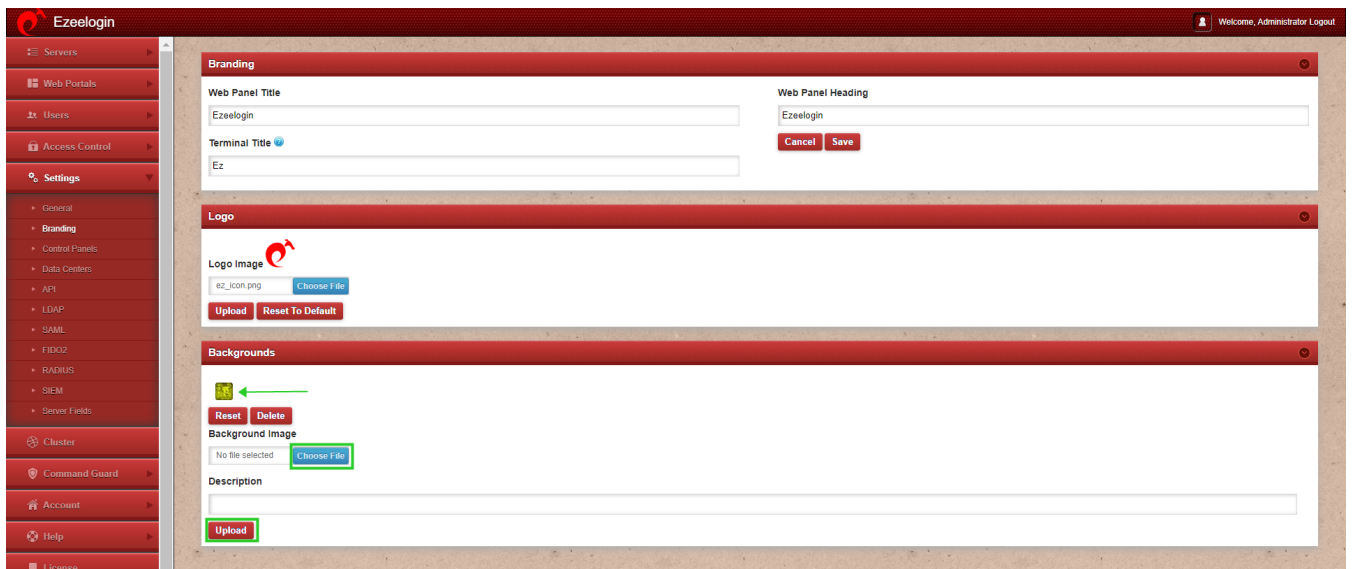

The following steps would *reflect globally on all users*.

Navigate to **Settings > Branding > Add logo** by choosing the file from your desktop and then upload it.

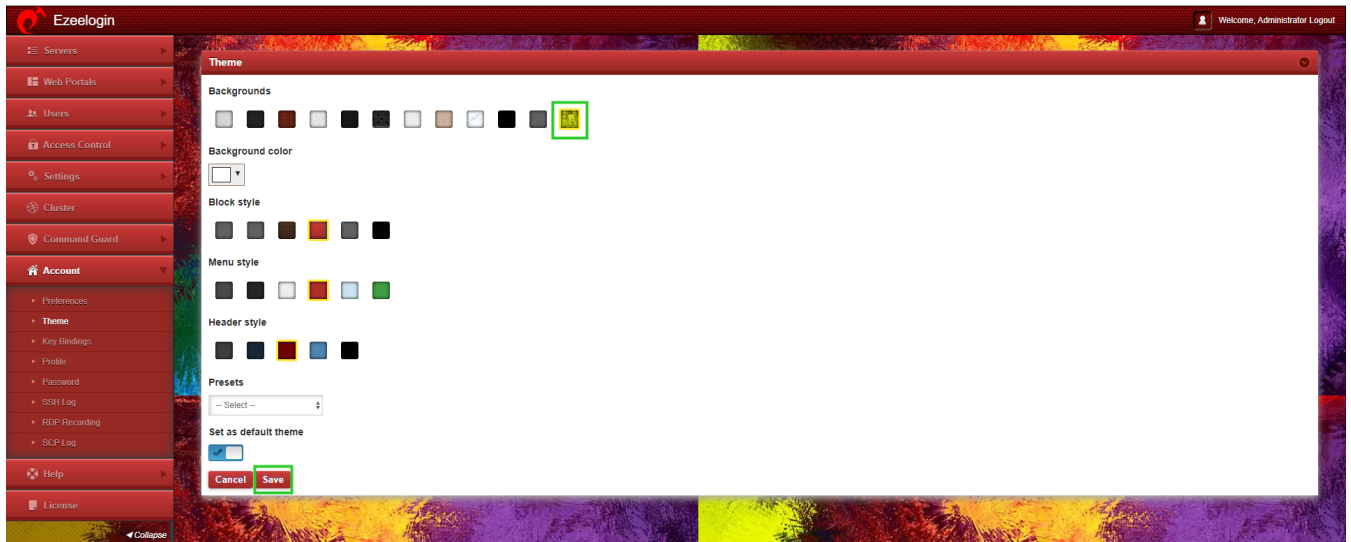

Step 4: Similarly, you can **customize the background image** under the same panel option

Choose the file from your desktop > add a description and upload it.

Following this you will see the uploaded background image in the theme section under Account.

Click on the uploaded background image and save it.
