

how to create a complete backup of ezeelogin installation?

70 admin October 2, 2024 [Migration & Maintenance](#) 9298

How do I create a complete backup of my Ezeelogin installation?

Overview: The article explains how to efficiently create and restore Ezeelogin backups by skipping large log directories to speed up the process, while ensuring the proper configuration for a successful restoration.

Step 1: Execute the command `/usr/local/sbin/backup_ezlogin.php` and this would create a binary executable backup archive in `/var/ezlogin_backup_xx_x.bin`.

The directory `/var/log/ezlogin` stores the user SSH sessions that are recorded. This dir could run into a huge size (1GB >) which would cause the backup script to take longer to complete (The log dir has to be tarred and then gzip'ed compressed which is time-consuming and resource intensive). In such, cases it's advisable to skip the log directory while running the backup script as follows.

```
root@gateway:~# /usr/local/sbin/backup_ezlogin.php -nologs
```

Make sure to back up `/var/log/ezlogin` when you backup ezeelogin with the `nologs` option.

```
root@gateway:~# cp -pr /var/log/ezlogin /var/log/ezlogin_backup
```

```
root@gateway:~# /usr/local/sbin/backup_ezlogin.php
```

```

#####

Ezeelogin restored. (Log: /var/log/ezlogin_restore.log)

#####

Please check the log file.

For assistance, please contact support with the content of the log file.

#####

Web panel installed at:

' /var/www/html/ezlogin/ '

(http://yourdomain.com/ezlogin/).

#####

Note: Please check the log file to see if any error occurred.

TODO NOTES:

Enable web server, MySQL server and cron to startup at boot time.

For free assistance, please contact support@ezeelogin.com

Thank you for choosing Ezeelogin.

Step 2(A): Following shows the help menu for restoring Ezeelogin

```
root@gateway:~# /var/  
ezlogin_backup_v7.37.11_b381_p8.2.20_Sat_Jun_29_2024_09_02_32_UTC.bin  
-- -help  
  
Creating directory  
ezlogin_backup_v7.37.11_b381_p8.2.20_Sat_Jun_29_2024_09_02_32_UTC  
Verifying archive integrity... 100% MD5 checksums are OK. All good.  
Uncompressing Ezeelogin 7.37.11 backup (PHP 8.2.20,  
Sat_Jun_29_2024_09_02_32_UTC) 100%
```

```

|____/
```

```
#####
# Ezeelogin Restore #
#####
```

Options:

- help : Show this help
- version : Show the version
- www <path> : Path from where web server will serve the web panel files
- sys <path> : Path where web panel will search for its system files
- uri <path> : Request URI path to access the web panel
- dbhost <host> : Specify hostname or IP address of MySQL server
- dbport <port> : Specify the port MySQL server is listening on
- dbsuser <username> : Specify database super (root) user name
- dbspass <password> : Specify database super (root) user password
- force_https <yes/no> : Whether to force HTTPS for web panel
- noauto : Prompt for options
- usebin <absolute_path> : Use the provided binary package instead of downloading
- lic_timeout <seconds> : Timeout for connecting to Ezeelogin license server. Default: 30
- proxy_host <host> : Proxy host for connecting to Ezeelogin license server
- proxy_port <port> : Proxy port for connecting to Ezeelogin license server
- proxy_user <username> : Proxy user for connecting to Ezeelogin license server
- proxy_pass <password> : Proxy pass for connecting to Ezeelogin license server
- mysql_encrypt <yes/no> : Whether to enable secure mysql connection
- mysql_ssl_key <absolute_path> : Path to the private key file for secure MySQL connection
- mysql_ssl_cert <absolute_path> : Path to the public key certificate file for secure MySQL connection
- mysql_ssl_ca <absolute_path> : Path to the certificate authority file for secure MySQL connection
- mysql_ssl_cpath <absolute_path> : Path to a directory containing trusted CA certificates for secure MySQL connection

```
-mysql_ssl_cipher <ciphers> : List of *allowed* ciphers to be used for the encryption, separated by colons (':')  
-mysql_ssl_verify <yes/no> : Whether to verify the server certificate for secure MySQL connection
```

Step 3: To restore the Ezeelogin database on a different database host, specify the **DB host**, **port**, and other relevant details during the restoration process.

Here is an example of restoring Ezeelogin on a remote database. Replace **dbhost**, **dbport**, **dbuser** and **dbpasswd** with the correct values

```
root@gateway:~# sh  
ezlogin_backup_v7.37.10_b381_p8.2.20_Sat_Jun_20_2024_09_02_32_UTC.bin  
-- -dbhost 192.168.1.8 -dbport 3306 -dbuser root  
-dbpasswd OvJGZGfmXhr jUpM
```

Step 4: Follow the step below if you want to do the **restore in one step** with your existing settings and without being prompted. Replace the backup filename with your own backup file.

```
root@gateway:~# sh  
ezlogin_backup_v7.37.10_b381_p8.2.20_Sat_Jun_20_2024_09_02_32_UTC.bin  
-- -skipgeolite -auto -force -ACCEPT_SETTINGS -I_ACCEPT_EULA
```

You need to check the `/var/log/ezlogin_backup.log` and `/var/log/ezlogin_restore.log` to see if any errors occurred during the backup and restore process
