How do i export all server password into an excel file?

How do I export all server root passwords and other information into an Excel file?

Synopsis: Efficiently managing server credentials and other sensitive information is crucial. Exporting this data into an Excel file can streamline documentation and facilitate easier management.

 Here's a step-by-step guide on how to achieve this using a backend export script:

Prerequisites:

1. **Access and Permissions**: Ensure you have root or sudo access to the server.

Read the manual for reference: https://www.ezeelogin.com/user_manual/Exportservers.html

Steps:

You may use the backend export script.

```
root@jumpserver:~# php /usr/local/ezlogin/ezxport.php <output
file> [<delimiter>]

( Specify an output file and a delimiter character.)
```

By following these instructions, you can effectively utilize the ezxport.php script to export server root passwords and other information into an Excel file, tailored to your needs.
