

# Change the web URL / URI of Ezeelogin Installation

72 admin July 2, 2024 [Tweaks & Configuration](#) 6021

## How to Change the Ezeelogin Web URL by Removing the /ezlogin Suffix

---

I'm trying to modify our server so we do not need to reference the /ezlogin at the end of our URL. I modified the apache configs accordingly, however it stops the Ezeelogin panel from working.

---

**synopsis:** To change the Ezeelogin web URL to remove the /ezlogin suffix, modify the `uri_path`, `cookie_path`, and `www_folder` settings in the `/usr/local/etc/ezeelogin/ez.conf` file and copy the Ezeelogin web files to the desired directory in the web server's document root.

---

To change the Ezeelogin web URL from

```
example:
```

```
http://mysshgateway.com/ezlogin to http://mysshgateway.com
```

**step 1.** Check the Document Root for the virtual host `ezsshgateway.com` in the apache web configuration file.

```
DocumentRoot /home/mygate/public_html
```

**step 2.** Edit `/usr/local/etc/ezeelogin/ez.conf` and Make the following changes. Replace the below with correct details

```
uri_path /ezlogin
```

```
cookie_path /ezlogin
www_folder /home/mygate/public_html/ezlogin
```

TO

```
uri_path /
cookie_path /
www_folder /home/mygate/public_html
```

**step 3.** All the Ezeelogin web files need to be copied from the folder.

```
/home/mygate/public_html/ezlogin to /home/mygate/public_html/
```

Again, if you want to access your Ezeelogin installation as "<http://mysshgateway.com/ez>", Copy the ezeelogin web files from **/home/mygate/public\_html/ezlogin to /home/mygate/public\_html/ez.**

After, edit the following variable in /usr/local/etc/ezlogin/ez.conf

```
uri_path /ez
cookie_path /ez
www_folder /home/mygate/public_html/ez
```
