

Accessing the server via domain name

Locating and logging into the server with a domain via ezsh shell

Overview: This article explains how to locate a server by its domain name within the list of servers listed on the gateway server and establish an SSH connection to it.

Let's see how to locate the server with the domain name 'debianserver1.com' from the server list on the Ezeelogin gateway server.

Step 1. SSH into the gateway server.

Step 2. Press **F11** or **'J'** to input the domain name. Enter the domain name 'debianserver1.com' and press 'Enter'.
