How to get the list of servers whose password management option is not set for automatic resetting?

Overview: This article assists gateway users in listing the servers that do not have the automatic password reset option enabled.

Step 1: Run the below query on the gateway server to retrieve the list of servers whose password management option is not set for automatic resetting.

```
root@gateway:~# mysql -u root -p -e "USE $(grep -oP 'db_names+KS+' /usr/local/etc/ezlogin/ez.conf); SELECT name, keep_password FROM $(grep -oP 'db_prefixs+KS+' /usr/local/etc/ezlogin/ez.conf)servers WHERE keep_password != 'N';"
```

Enter password:

```
+-----+-----+
| name   | keep_password |
+-----+-----+
| web.eznoc.com | O |
| production.eznoc.com | Y |
| dev.eznoc.com | S |
+-----+-----+
```

In the above command, the value 'N' for **keep_password** indicates that [Automatic password management](#).

From the above output **O**, **Y** and **S** represents different [password management](#) options

Step 2: Run the below query on the gateway server to retrieve the list of servers whose password management option is set for automatic resetting.

```
root@gateway:~# mysql -u root -p -e "USE $(grep -oP 'db_names+KS+' /usr/local/etc/ezlogin/ez.conf); SELECT name, keep_password FROM $(grep -oP 'db_prefixs+KS+' /usr/local/etc/ezlogin/ez.conf)servers WHERE keep_password = 'N';"
```

Enter password:

```
+-----+-----+
| name   | keep_password |
+-----+-----+
| db.eznoc.com | N |
+-----+-----+
```

O : One time password

Y : Keep given password

S : Keep server password

N : Automatic password
